vas signs

A light blue rectangular sign is mounted on a black post. On the left side of the sign, there is a black rectangular area containing a digital display of the number '46' in orange LED lights. Above this display are two small rectangular cutouts and a circular hole. To the right of the digital display, the text 'DAYS IN HOSPITAL BED' is printed in white, bold, sans-serif capital letters. On the far right of the sign, there is a white rectangular box containing the text 'SPEED LIMIT' in small black letters above the number '25' in large black letters. Below this box, the text 'SLOWER IS BETTER' is printed in white, bold, sans-serif capital letters. At the bottom right of the sign, the text 'ELM GROVE POLICE' is printed in white, sans-serif capital letters. The sign is positioned on a grassy area next to a paved road, with trees in the background.

itemized energy feedback

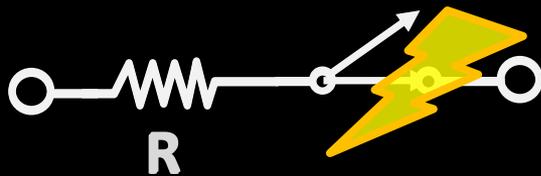

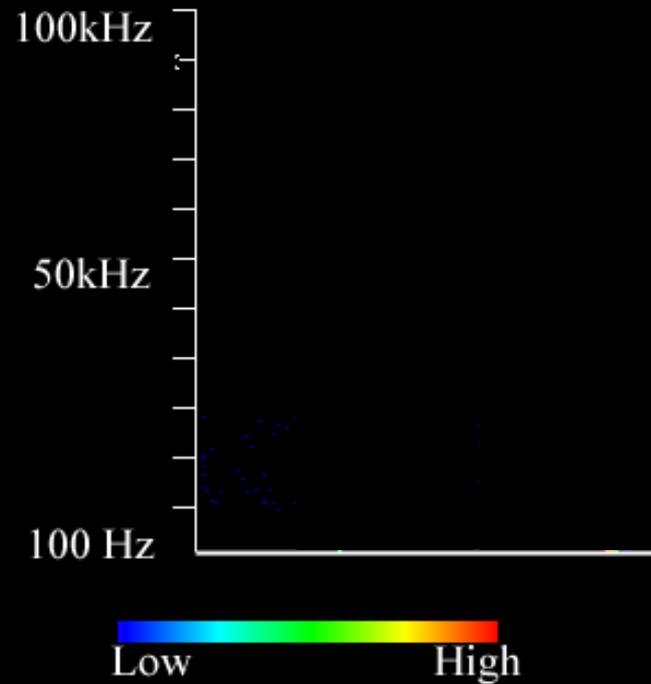

At the flick of a switch: Detecting and Classifying Unique Electrical Events on the Residential Power Line.

Shwetak N. Patel, Thomas Robertson, Julie A. Kientz, Matthew S. Reynolds, and Gregory D. Abowd
UbiComp 2007

how flick of a switch works

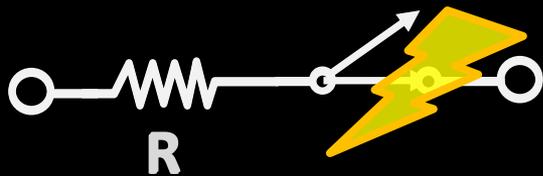

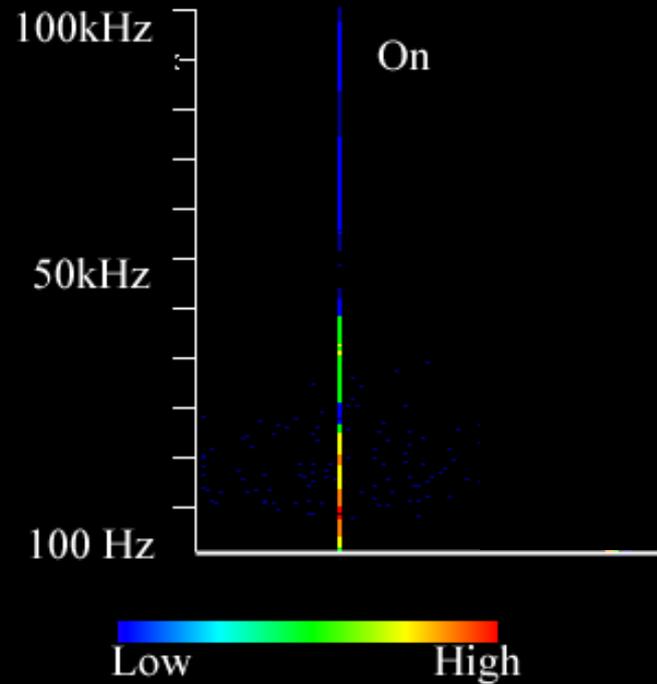

mechanical switches

electrical noise transient

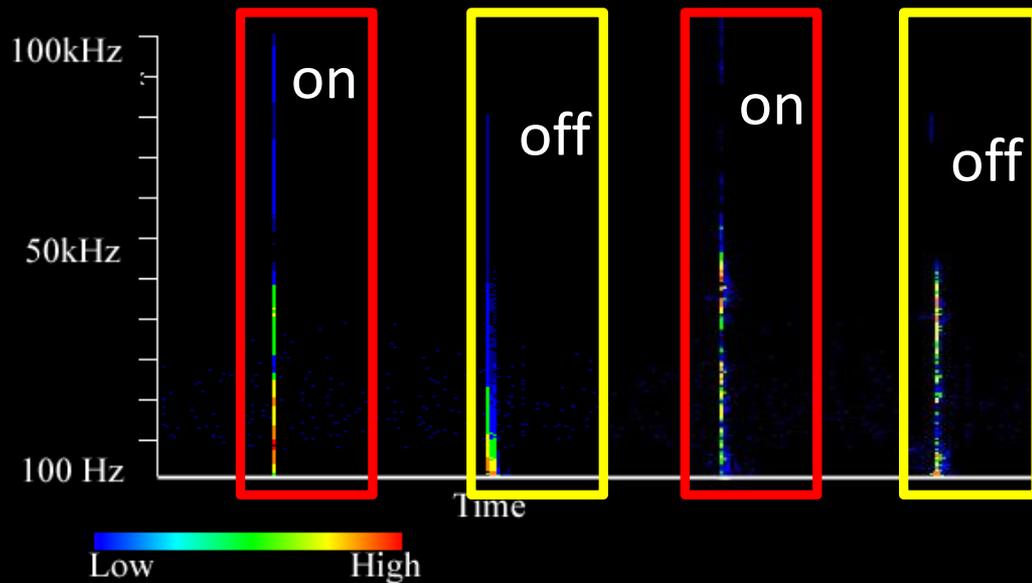

how flick of a switch works

mechanical switches

electrical noise transient

each switch has a unique transient signature

based on:

1. switching mechanisms
2. load characteristics
3. position on transmission line

switch 1

switch 2

transient noise is generated when a
physical switch is turned on/off

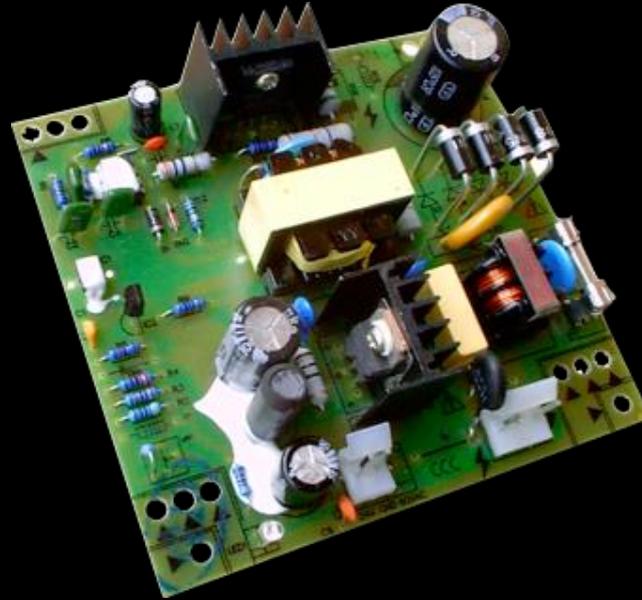

key problem is signal **depends** on
both the **device** and **switch**

most modern consumer electronics
have a **soft-switch**

switched mode power supply

smps based appliances are becoming
increasingly prevalent

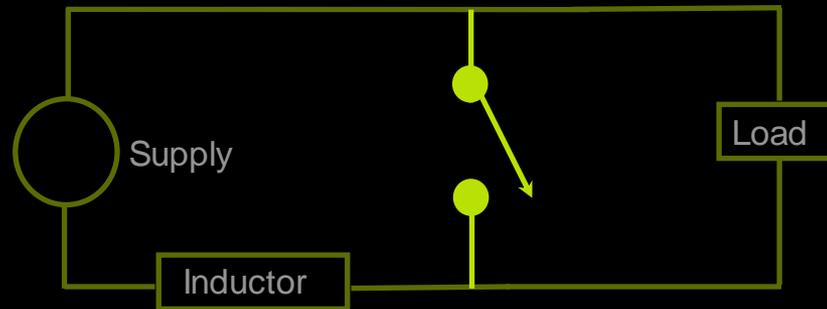

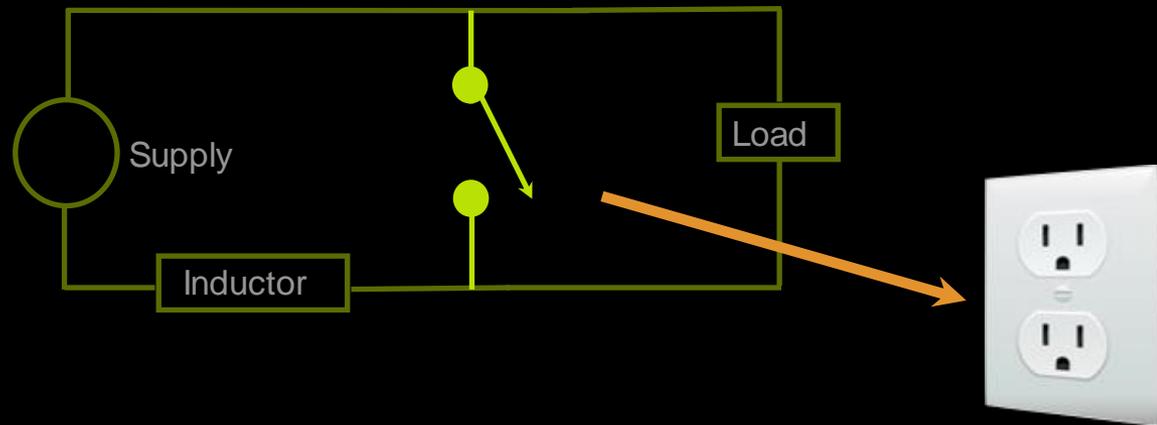

efficient and small in size.

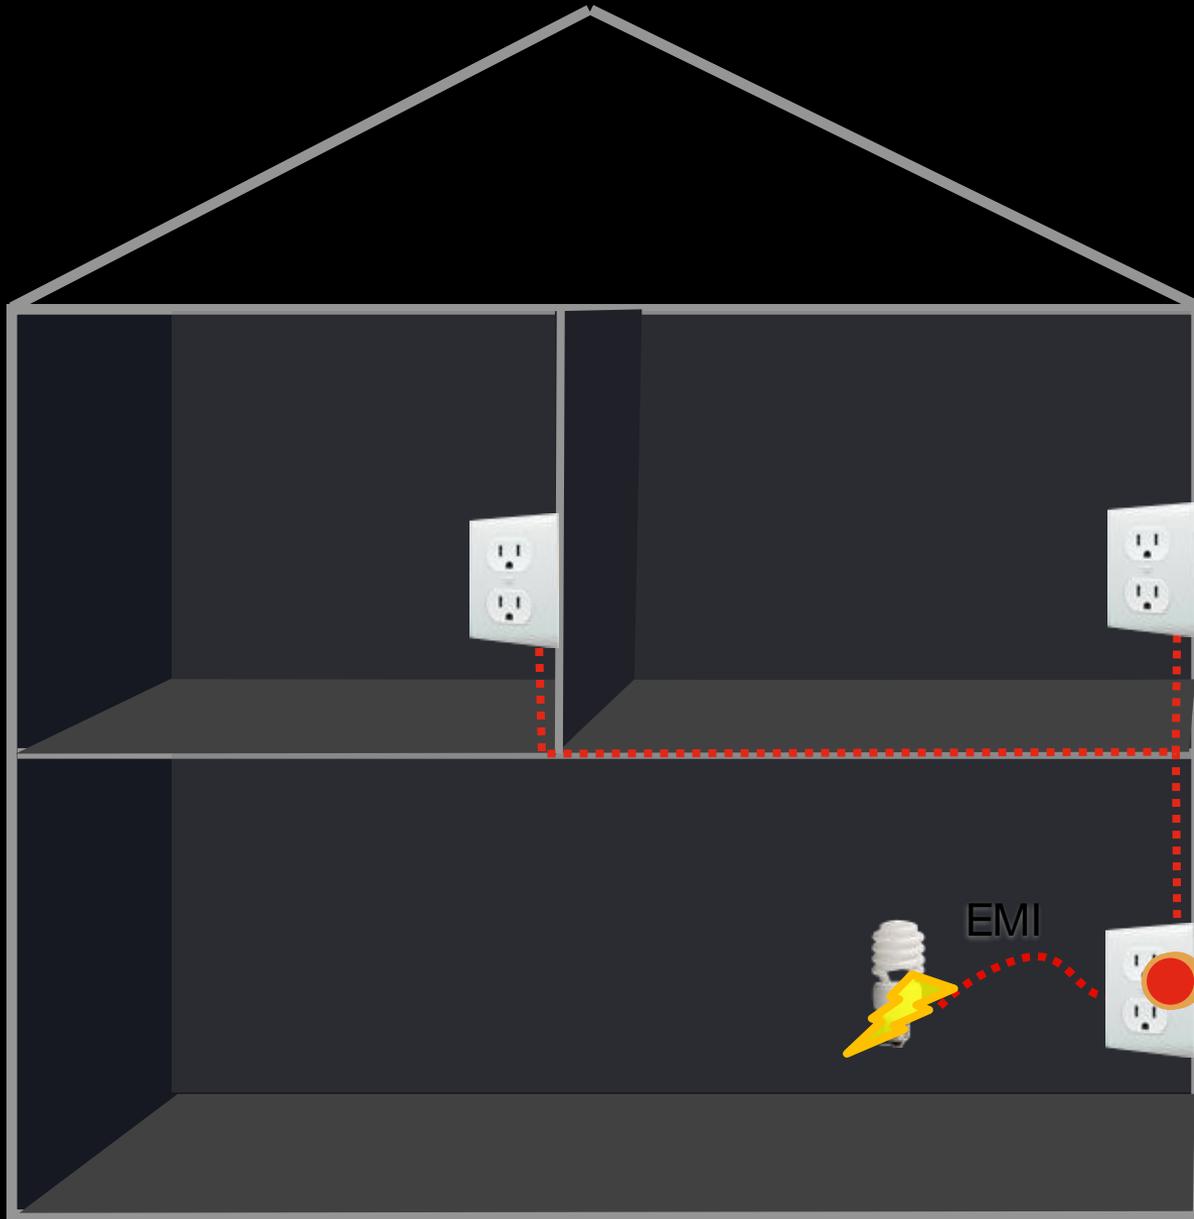

stores energy in inductors & switches it in and out
at high frequency.

switching operation generates high frequency
electro magnetic interference (emi)

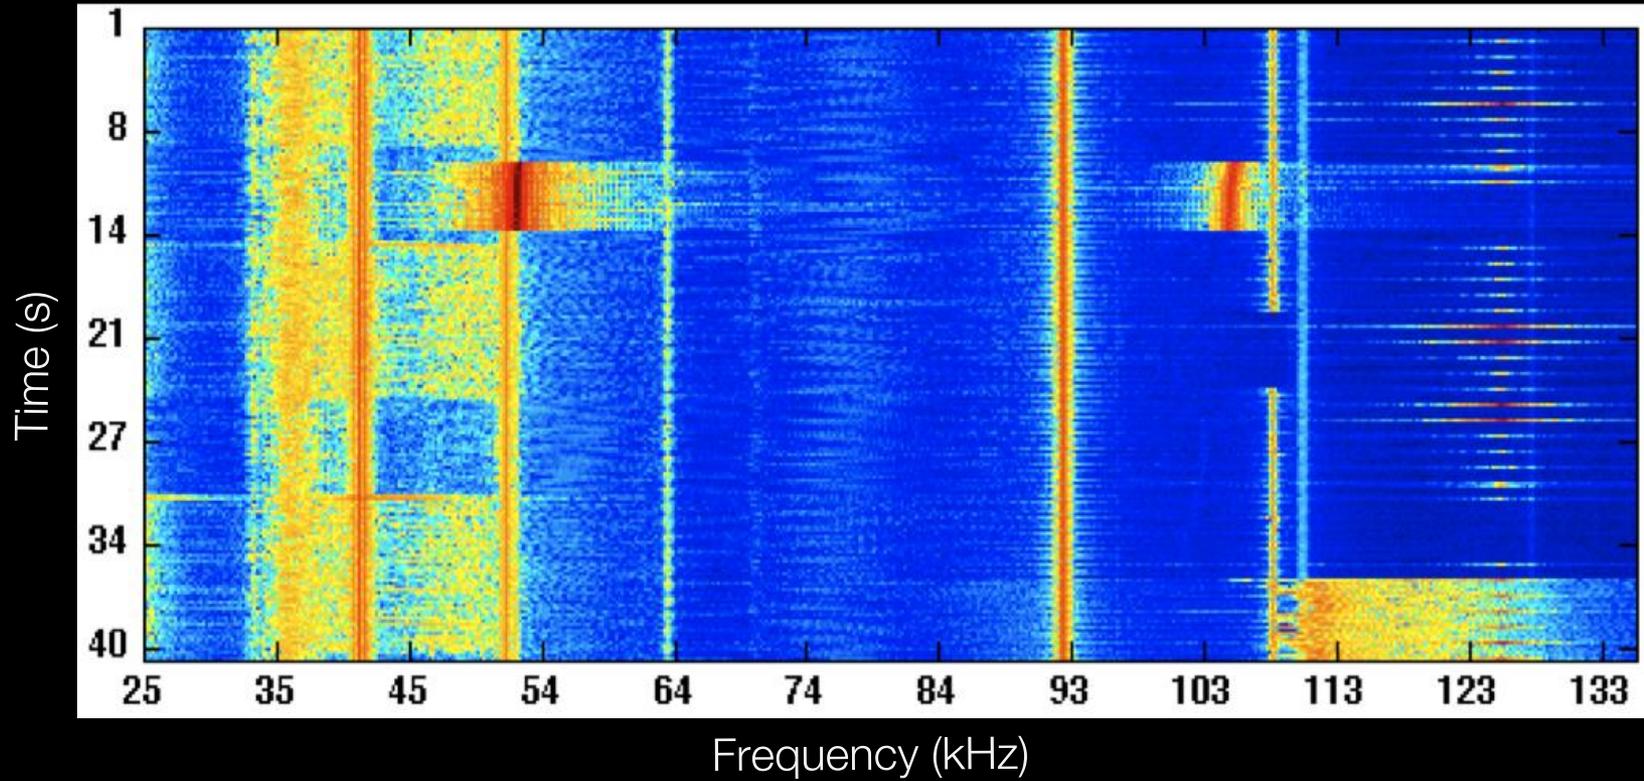

switching operation generates high frequency
electro magnetic interference (emi)

2

feature extraction

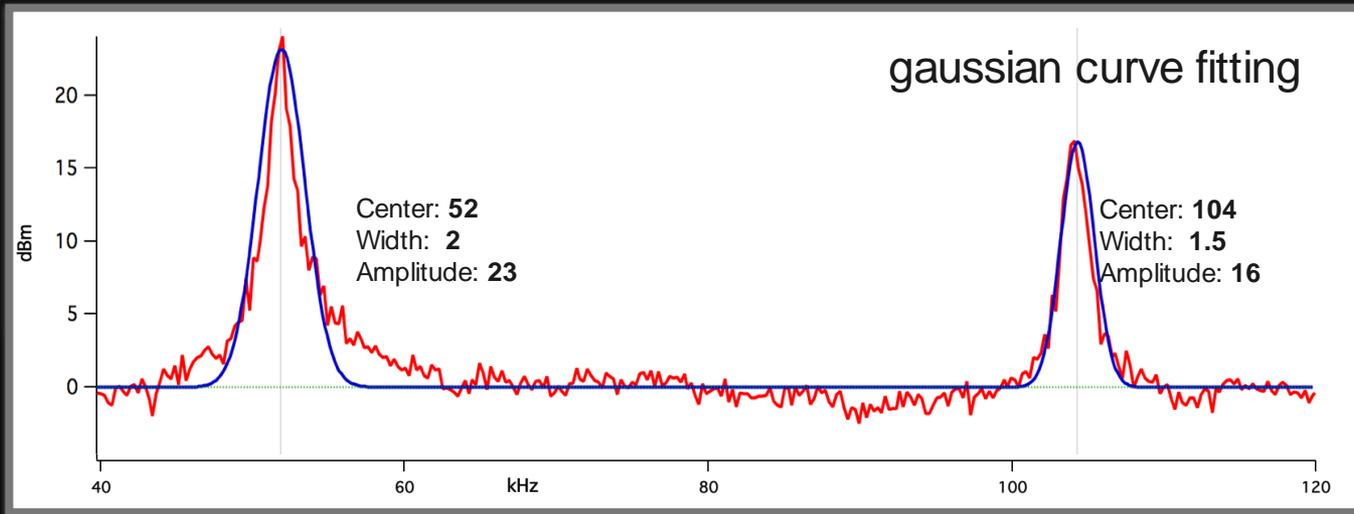

3 features

1. center frequency
2. bandwidth of signal
3. amplitude of signal

2

feature extraction

three features are extracted for each peak

event classification

three
features from
strongest peak

nearest neighbor
classifier

(i) are these features good enough for
accurate identification?

(ii) do signatures remain **stable** over **long**
period of time?

(iii) can **training** be **minimized** by applying signature from one home to another?

experiments in 7 homes

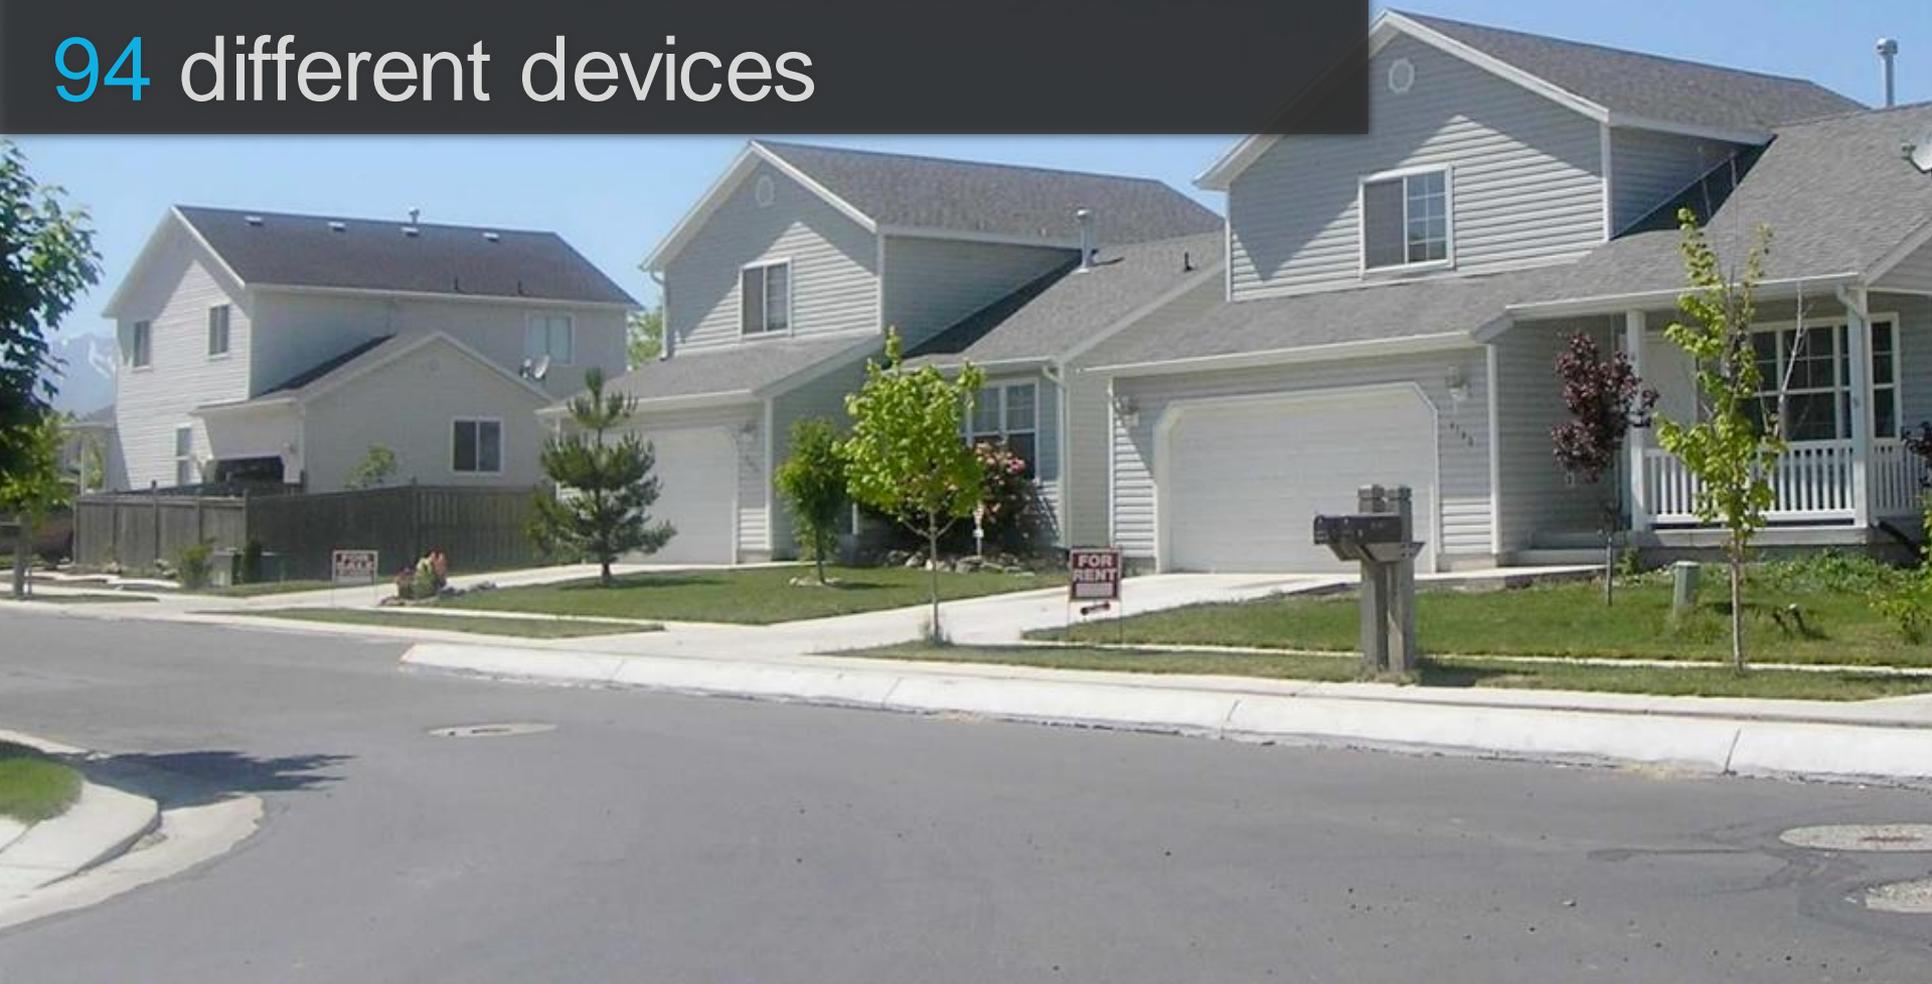

apartments & houses

home sizes: 650 - 3000 sq. ft.

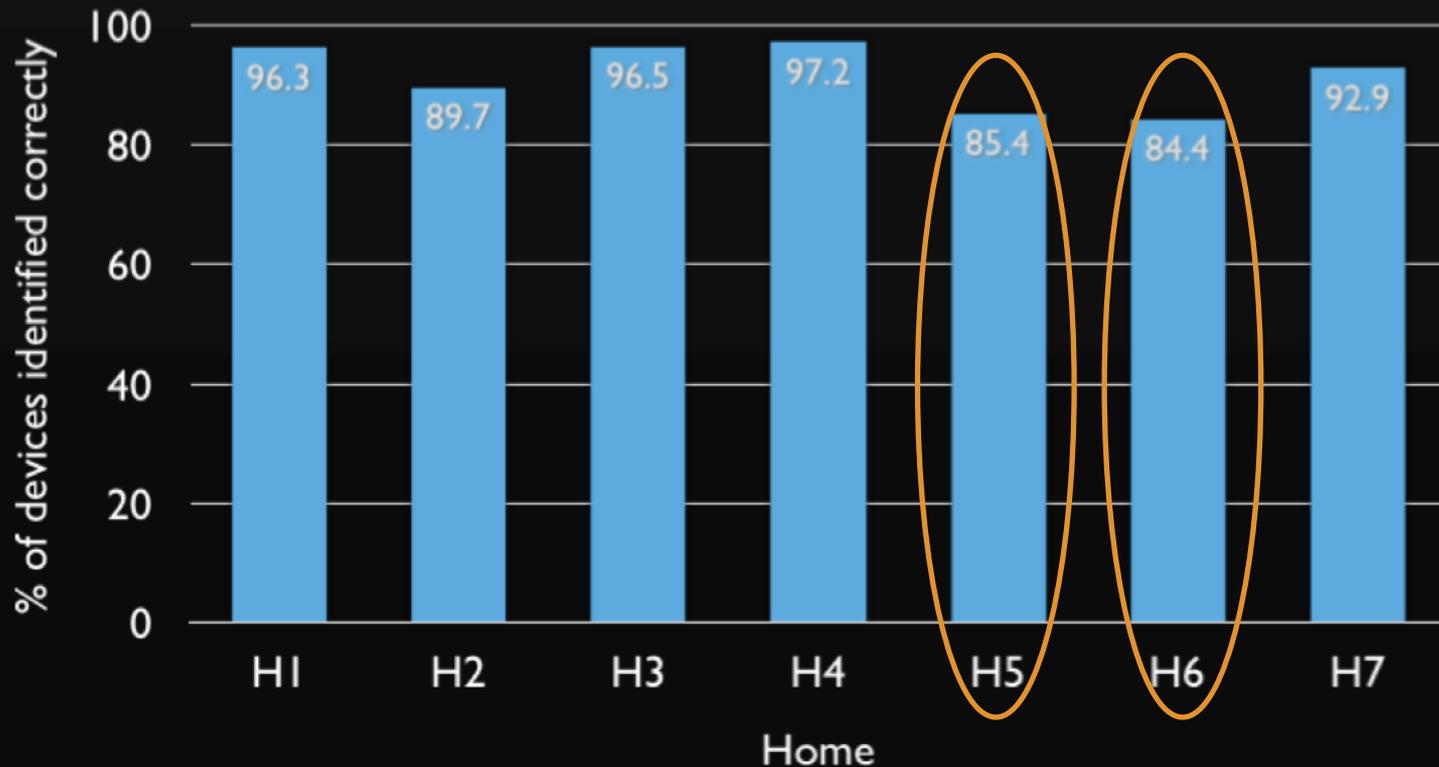

a total of 2576 electrical events

94 different devices

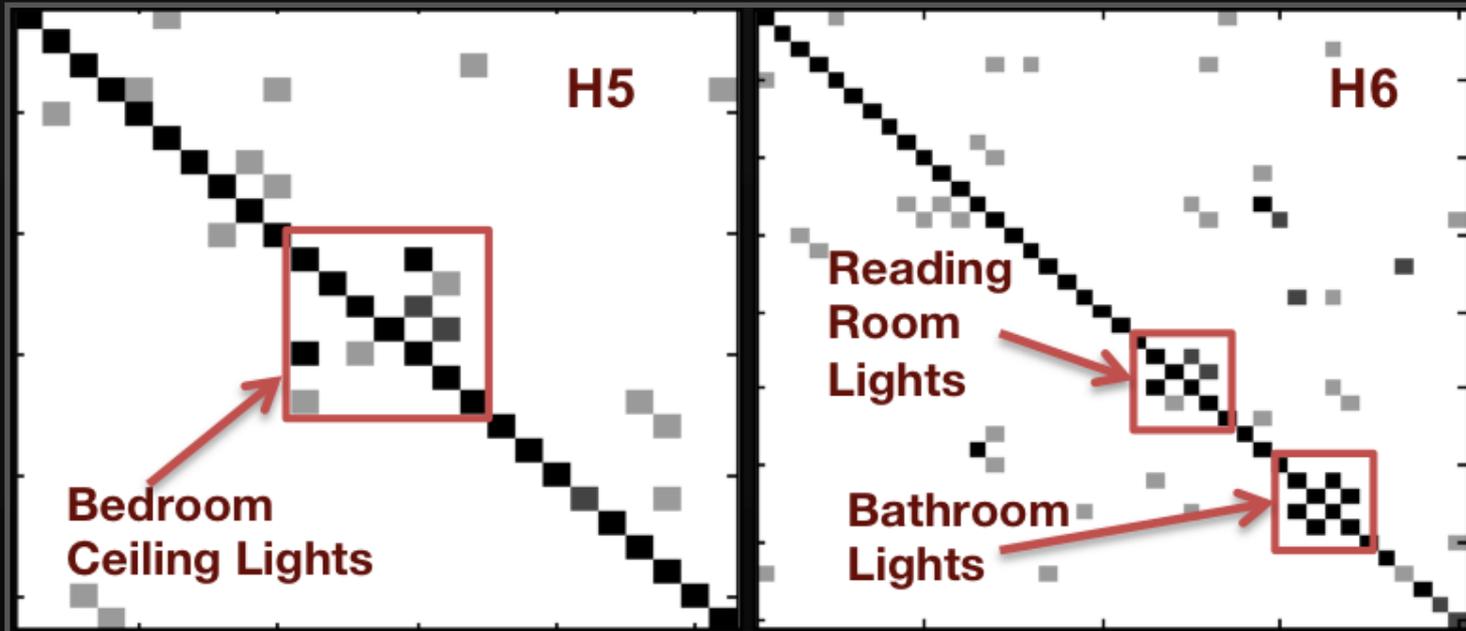

10 fold cross validation

average %: 91.75

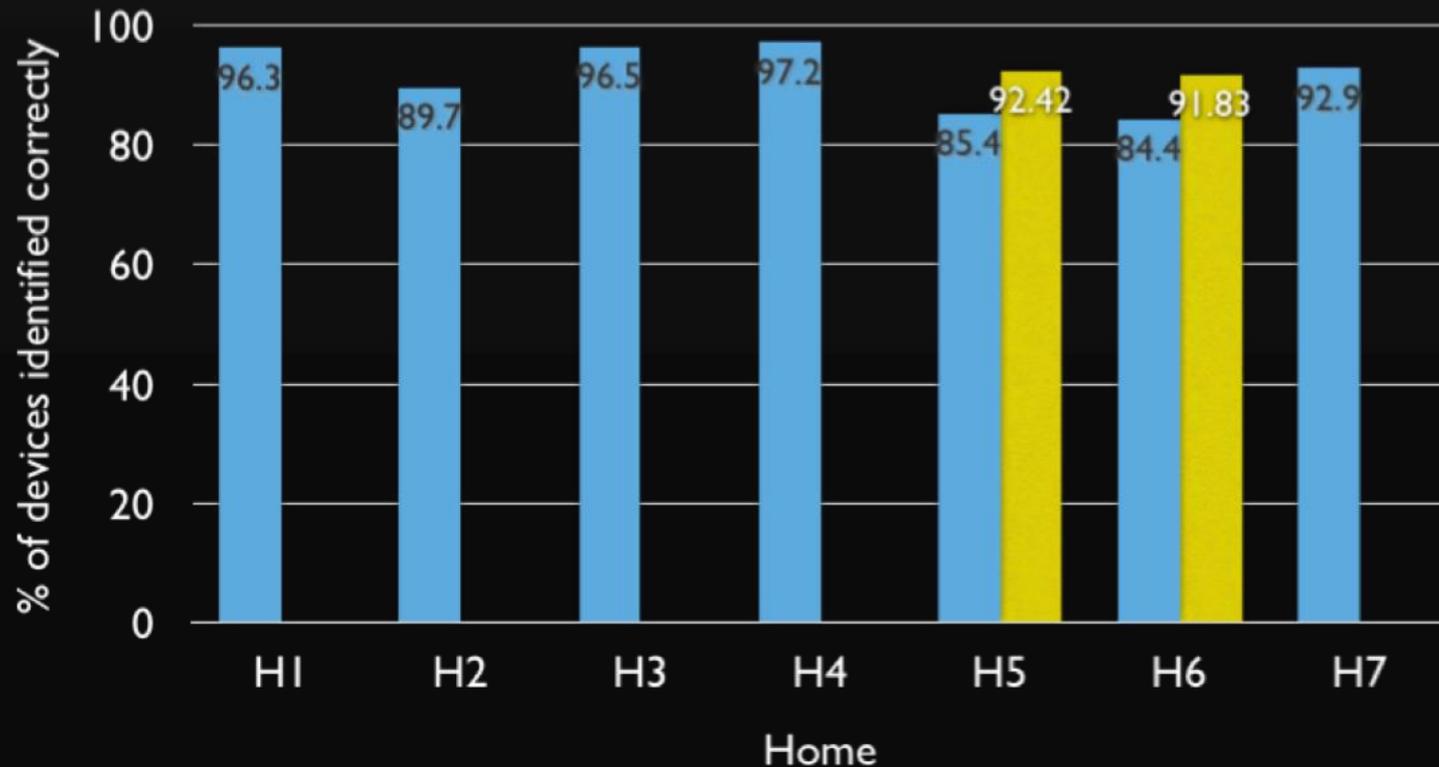

confusion matrices

10 fold cross validation

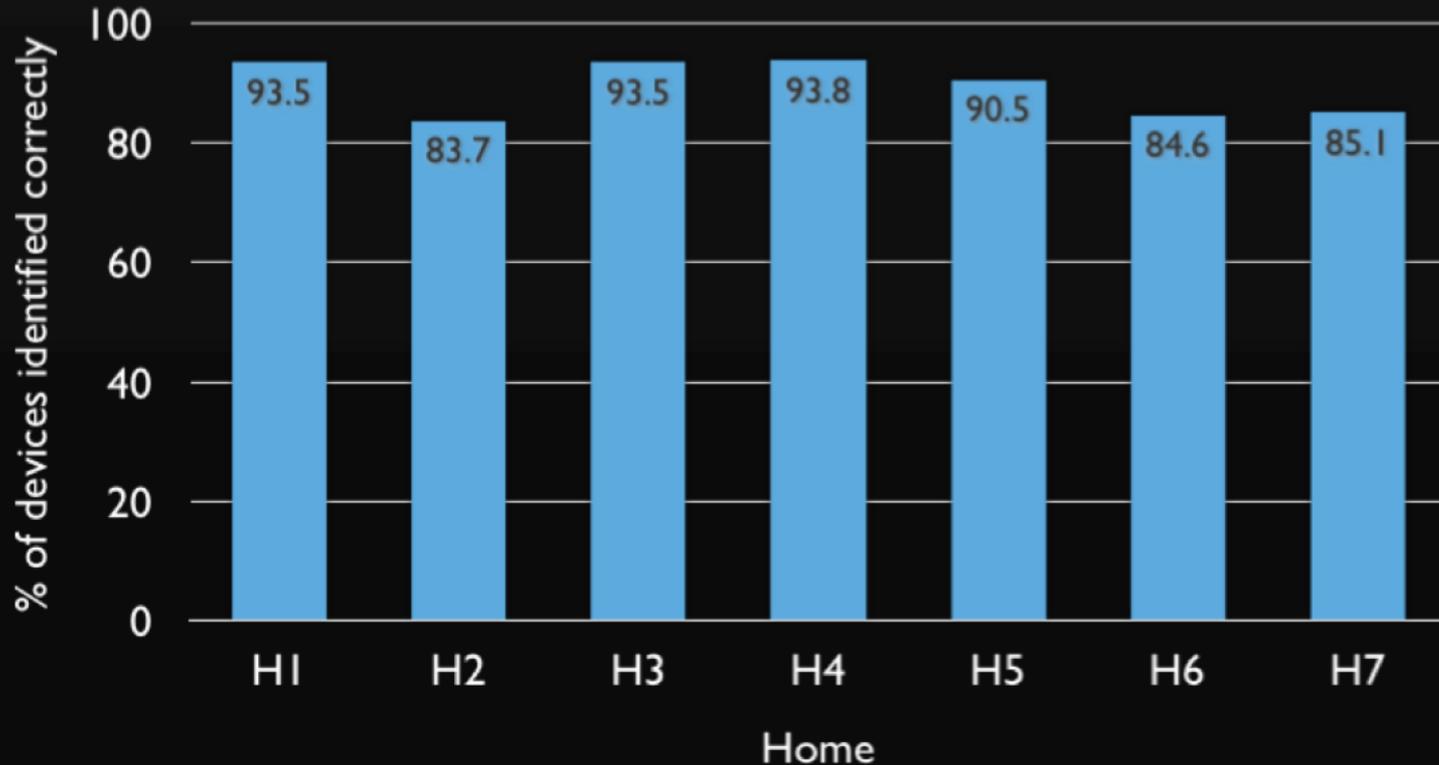

Average %: 93.82

training on a **single sample**
for each event

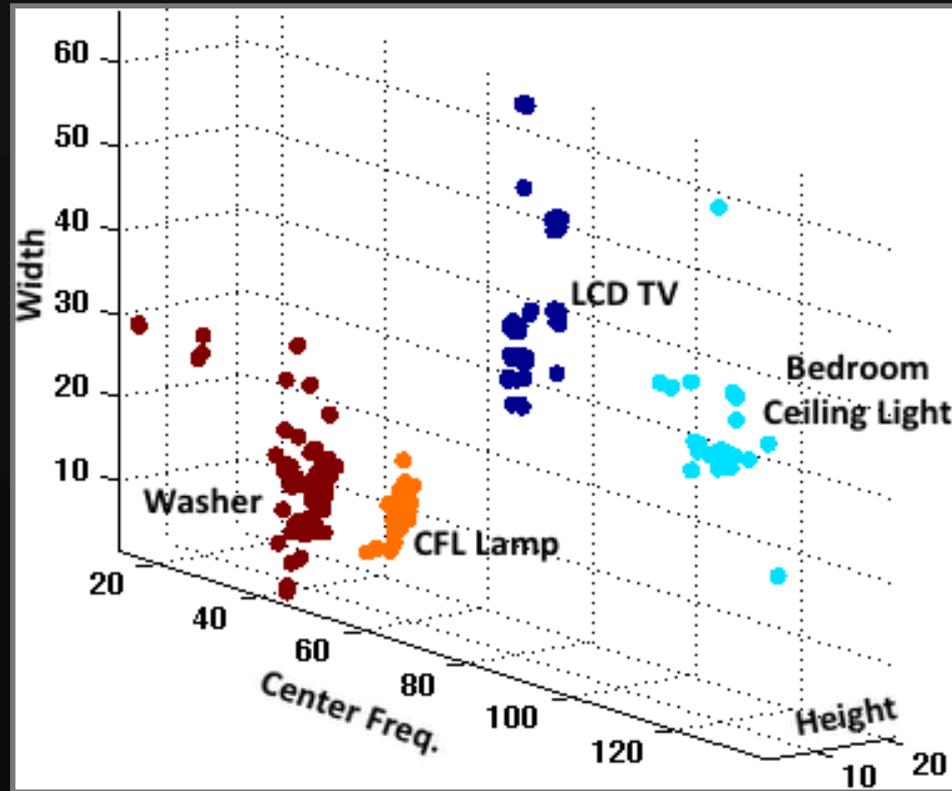

minimal training performance

Average %: 89.25

stability of signals over time

samples in feature space

potentially **minimizing** training by
applying signatures across home

we collected data for four of our own
devices that we brought to each home

two of the three features remain consistent

average accuracy: 100%

can signatures from one device be applied
to **another** given they are **similar models**?

signature similar enough to yield an
accuracy of 100%

water

Experiment 2: Let's Abuse a Battery!

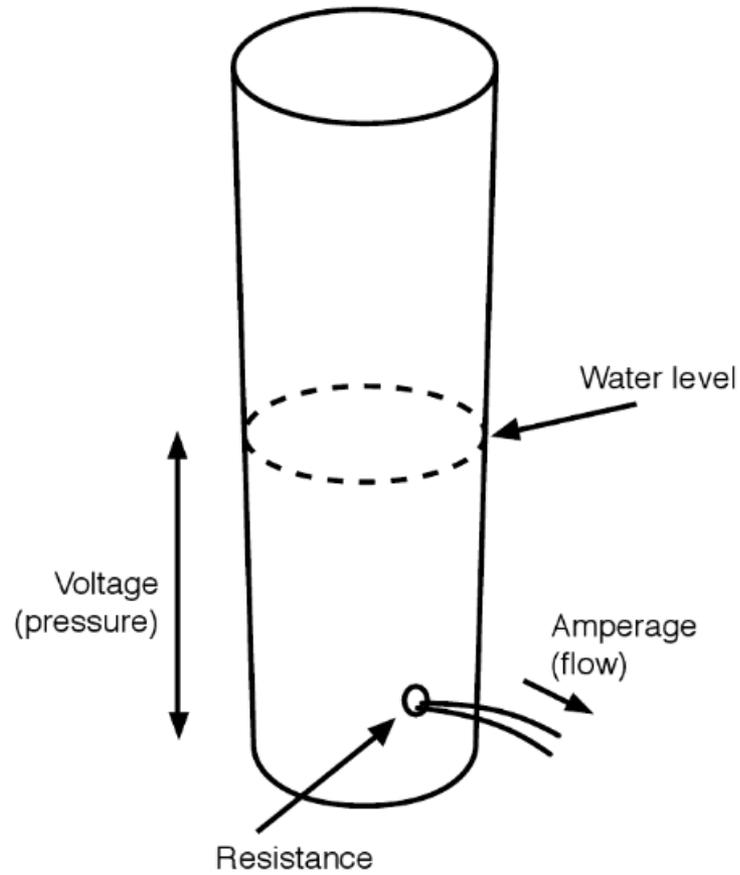

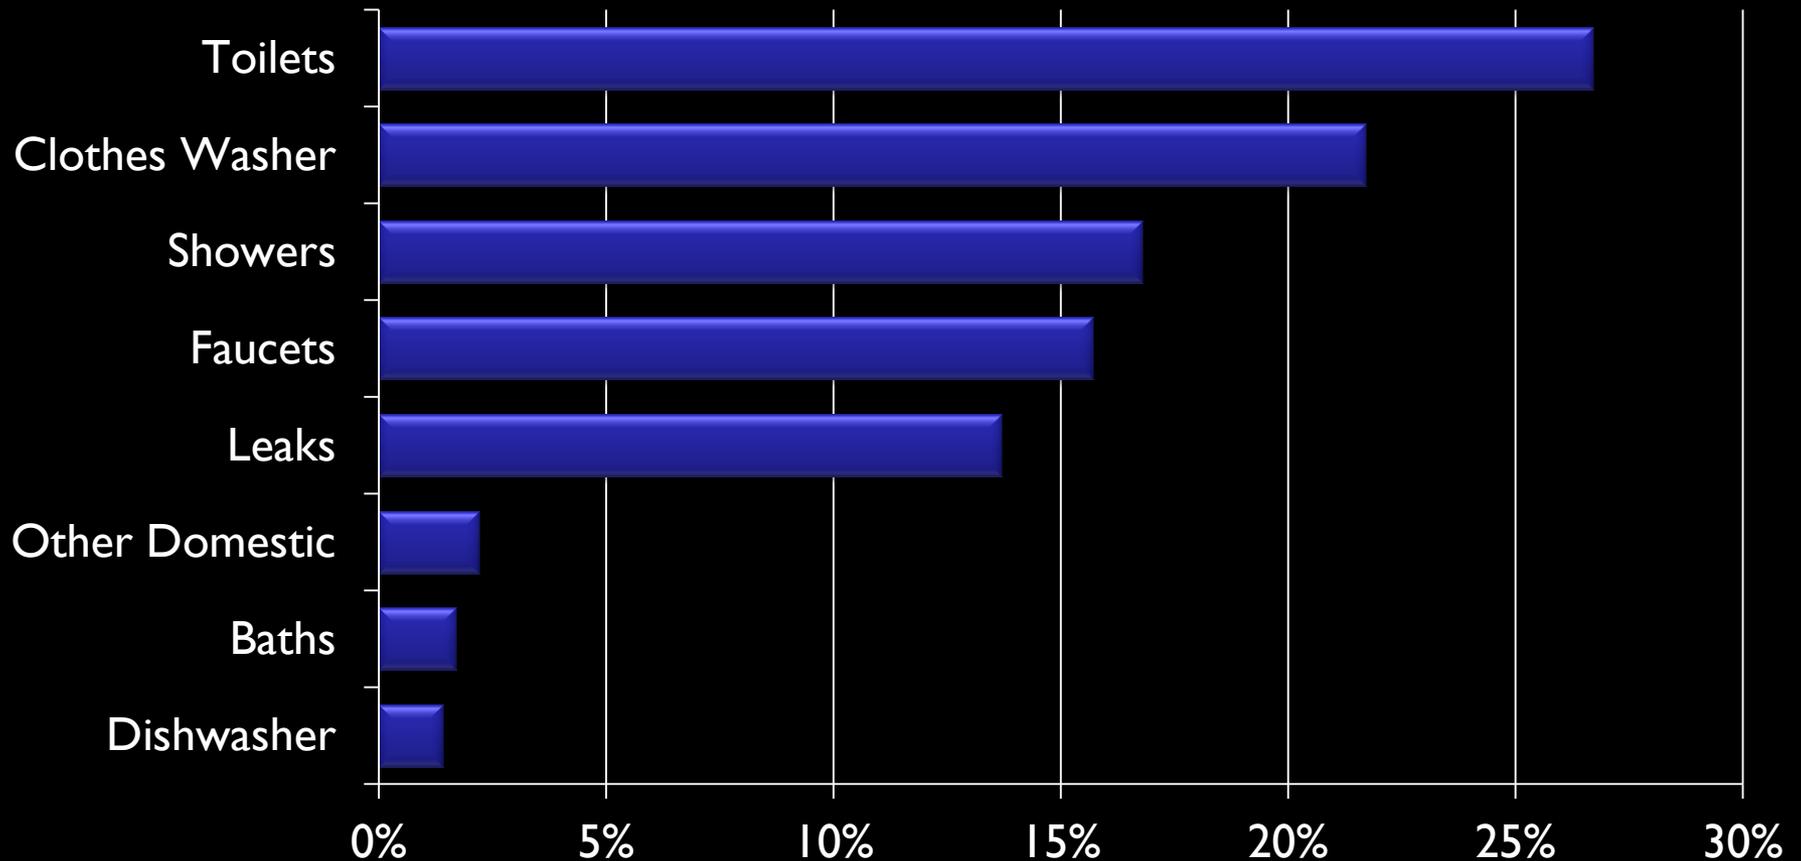

Figure 1-33. Think of voltage as pressure, and amperes as flow.

Figure 1-34. Larger resistance results in smaller flow—but if you increase the pressure, it may overcome the resistance and increase the flow.

what are the most consuming water activities in your home?

average indoor household water usage per person/day (70 gpd)

hydrosense

single-point pressure-based
sensor of water usage

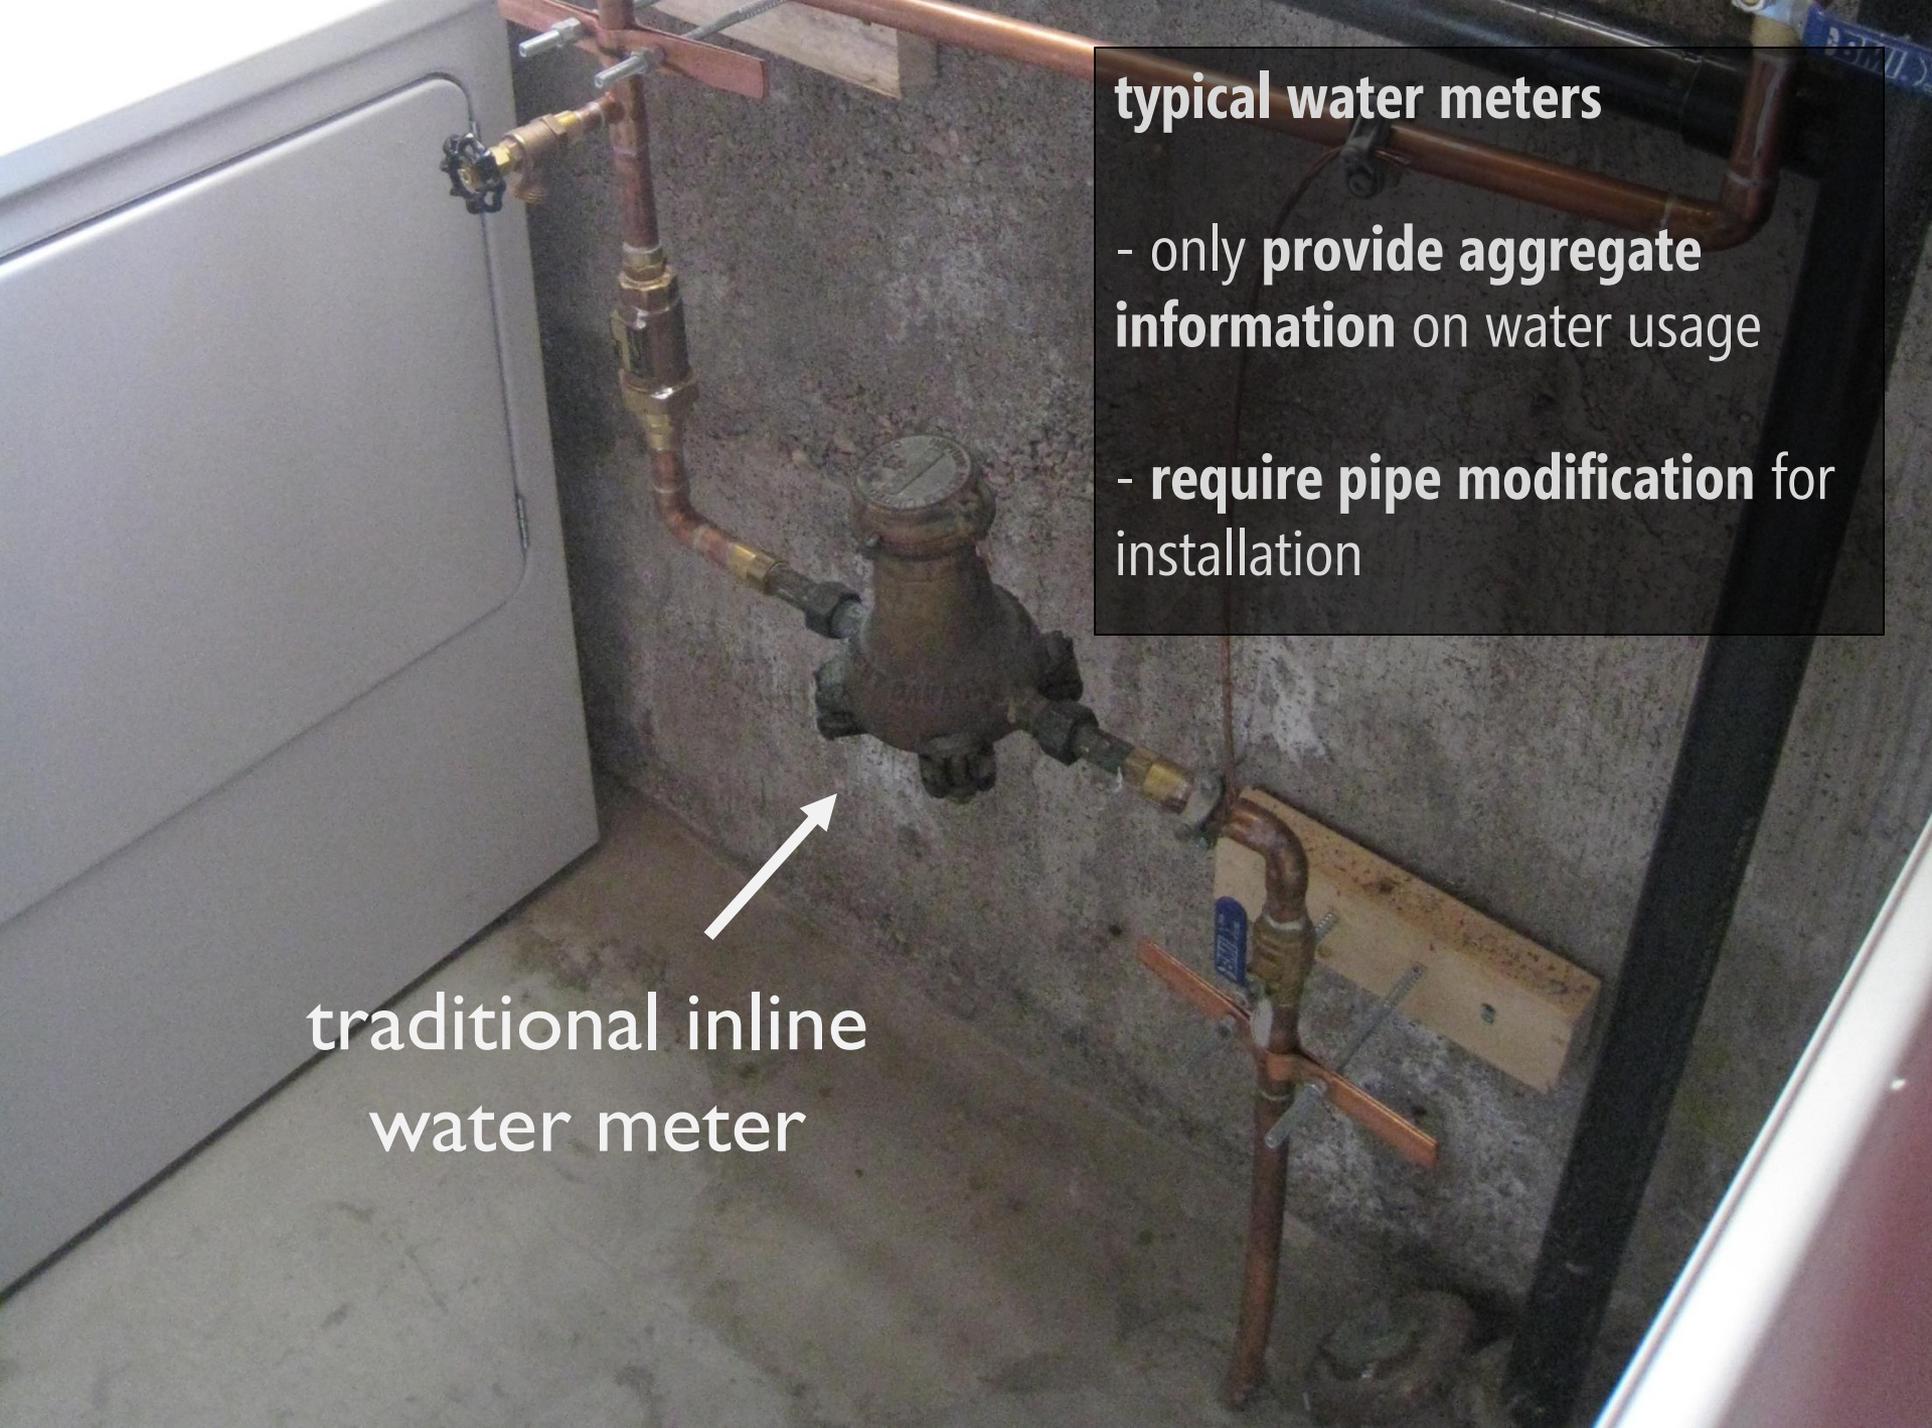

identifies water usage
activity down to its
source(e.g., toilet)

provides estimates of flow at
each fixture

typical water meters

- only provide **aggregate information** on water usage
- **require pipe modification** for installation

how it works

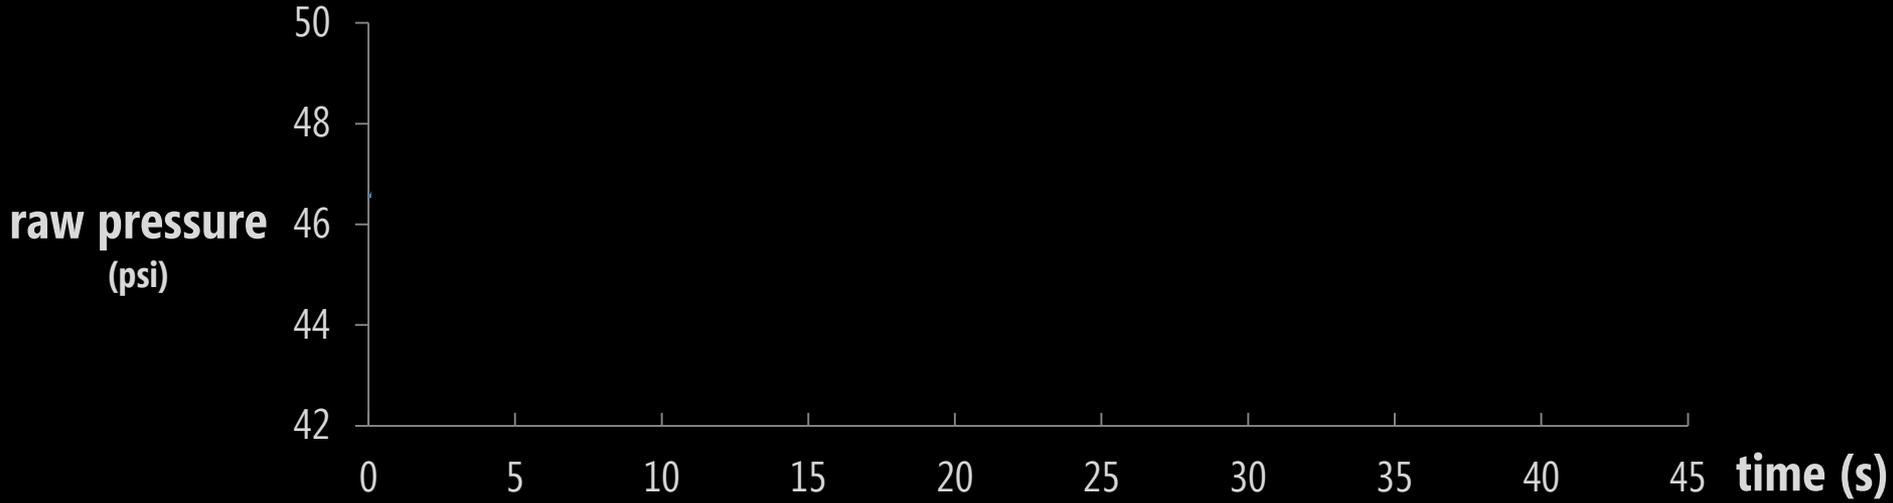

1. detect that a water event has occurred
2. classify event as "open" or "close"
3. determine source of event (e.g., toilet, shower).
4. provide flow estimate

dissaggragate water usage

but....

brushing teeth

A photograph of a man shaving in a bathroom. He is shirtless and has shaving cream on his face and chest. He is holding a razor to his cheek. In the foreground, the back of another person's shoulder and arm is visible, reaching towards the sink. The bathroom has a wooden vanity, a mirror, and a window in the background. A dark banner with the word "shaving" is overlaid on the left side of the image.

Home Remedies

How (1) am I going to (2) stop my hiccups? Eat a sugar cube. I (3) can't get rid of my sore throat. Drink (4) strong tea with a (5) piece of lemon and some honey. People to whom you (6) talk think differently as to (7) whether these (8) really work. Of (9) course, some home remedies (10) probably work (11) fine for (12) common problems, but for serious illnesses, a doctor (13) usually gives the best advice. Survey your friends and (14) family for (15) their home remedies that have (16) shown good results (17) through the years. Compile these get-well (18) ideas into a (19) class book, (20) complete with illustrations.

Skill Test

Write the word with the ing suffix.
