

The Mobile Phone as a (Massive) Data Collection Platform

Jon Froehlich

jfroehli@cs.washington.edu

PhD Student

Computer Science and Engineering
University of Washington

Mobile Phone Subscribers Worldwide 1995

1.67%

2010 Worldwide Projections

51.47% Mobile Phone Subscribers

19.12% PC Users

The mobile phone is positioned to revolutionize the way we can collect data about people, their behavior and the environment.

challenges

- How do we collect the data?
- How do we incentivize people to contribute data?
- How can we sustain participation over time?
- How do we handle privacy issues?
- How do we analyze/filter the data?

the myexperience tool

<http://myexperience.sourceforge.net>

sensors

Device usage and context states (e.g., GPS) of mobile devices automatically sense

- + Technique scales
- Cannot capture perception, response

Users respond to short context-triggered surveys on their mobile device.

- + Can gather otherwise imperceptible data (both qual. and quant.)
- Lower sampling rate than sensors (increased user burden)

context

self-report

myexperience

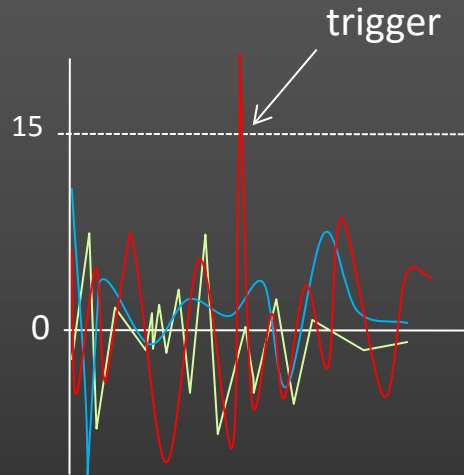

MyExperience is open source software under the BSD license

sensors, triggers, actions

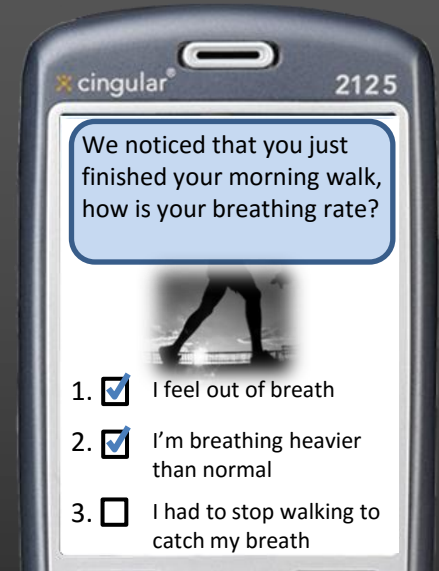

Sensors

Triggers

Actions

Example Sensor:

DeviceIdleSensor
PhoneCallSensor
RawGpsSensor
SmsSentSensor
HumanScaleActivitySensor

Example Triggers:

DeviceIdle > 15 mins
PhoneCall.Outgoing == true
Gps.Longitude == "N141.23"
SmsSent == true
Activity.StateExited == Walking

Example Actions:

ScreenshotAction
VibrationAction
SmsSendAction
DatabaseSyncAction
SurveyAction

hardware sensors

GPS Sensors

GpsLatLongSensor
GpsRecordSensor
GpsSpeedSensor
GpsSpeedWindowSensor
GpsSustainedSpeedSensor

GSM Sensors

GsmCommonCellRatioSensor
GsmCellSensor
GsmMotionSensor
PhoneSignalStrengthSensor

MSP Sensors

ActivityProbabilitySensor
MspConnectionSensor

software sensors

Device Usage Sensors

ButtonSensor
ActiveApplicationSensor
ForegroundWindowSensor
DeviceIdleSensor
MediaPlayerSensor

Communication Sensors

IncomingCallSensor
OutgoingCallSensor
SmsSentSensor
SmsReceivedSensor

Calendar Sensors

CalAppointmentSensor
CalAppointmentLocationSensor
CalAppointmentSubjectSensor

Device State Sensors

StorageCardFullSensor
PhoneProfileSensor
PowerLineSensor
PhoneRoamingSensor

Meta-Sensors

ActionCompletedSensor
ActionStartingSensor
GlobalsSensor
MyExpStartingUpSensor
MyExpShuttingDownSensor

Action Type	Summary Description
CreateProcessAction	Launches an additional process (this can be any executable that is local to the device).
KillProcessAction	Kills an existing process.
MessageAction	Displays a message in a dialog box to the user.
NotificationAction	Displays a notification in a dialog box to the user with a sound and/or vibration alert. User may respond “OK” or “Dismiss.”
PlayerAction	Plays a sound, vibrates the device, and/or flashes the device’s LEDs.
RecordAudioAction	Records audio in the background using the device’s microphone.
RestartDeviceAction	Restarts the device.
ScreenShotAction	Takes a screen shot of the current screen on the device.
SendSmsAction	Sends an SMS to a specified address.
SqlReplicationAction	If SQL Replication is setup, this action invokes a data replication with the master web server.
SurveyAction	Displays a survey to the user.

Action Type	Summary Description
CreateProcessAction	Launches an additional process (this can be any executable that is local to the device).
KillProcessAction	Kills an existing process.
MessageAction	Displays a message in a dialog box to the user.
NotificationAction	Displays a notification in a dialog box to the user with a sound and/or vibration alert. User may respond “OK” or “Dismiss.”
PlayerAction	Plays a sound, vibrates the device, and/or flashes the device’s LEDs.
RecordAudioAction	Records audio in the background using the device’s microphone.
RestartDeviceAction	Restarts the device.
ScreenShotAction	Takes a screen shot of the current screen on the device.
SendSmsAction	Sends an SMS to a specified address.
SqlReplicationAction	If SQL Replication is setup, this action invokes a data replication with the master web server.
SurveyAction	Displays a survey to the user.

Surveys do not necessarily have to ask simple closed form questions (e.g., Likert scale questions)

xml / scripting interface

- XML : Declarative

- Define sensors, triggers, actions, and user interface
- Set properties
- Hook up events

```
<sensor name="Motion" type="GsmMotionSensor">  
  <prop name="PollInterval">00:00:01</prop>  
</sensor>
```

- Script : Procedural

- Create fully dynamic behaviors between elements specified in XML
- Interpreted in real time
- New scripts can be loaded on the fly

```
<trigger name="Motion" type="Trigger">  
  <script>  
    motionSensor = GetSensor("Motion");  
    if(motionSensor.StateEntered = "Stationary"){  
      ... do some action ...  
    }  
  </script>  
</trigger>
```

Explicit
Implicit

TiVo's Suggestions

- | | |
|----------------------------|----------|
| 1 That '70s Show | Mon 4/10 |
| 2 Saturday Night Live | Sun 4/9 |
| 3 Oscar | Mon 4/17 |
| 4 The Drew Carey Show | Sun 4/9 |
| 5 Back to School | Sat 4/15 |
| 6 The Owl and the Pussycat | Sat 4/15 |
| 7 Innerspace | Wed 4/12 |
| 8 Senseless | Sun 4/9 |

Can we view place visit behaviors as an implicit form of expressing interest?

→ I like Pagliaccis Pizza?

→ I like Pizza?

→ I like Italian food?

Visits to more Italian restaurants

→ Make stronger claims?

explicit vs. implicit indicators

VS.

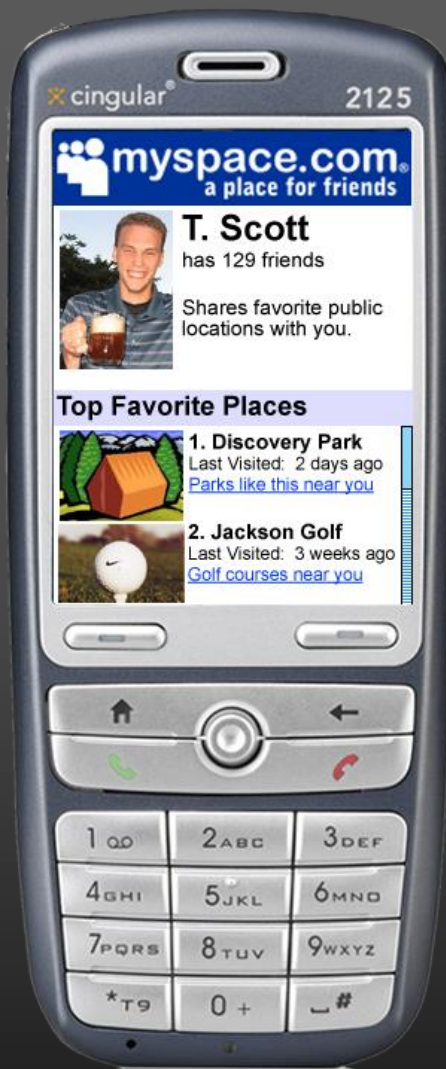

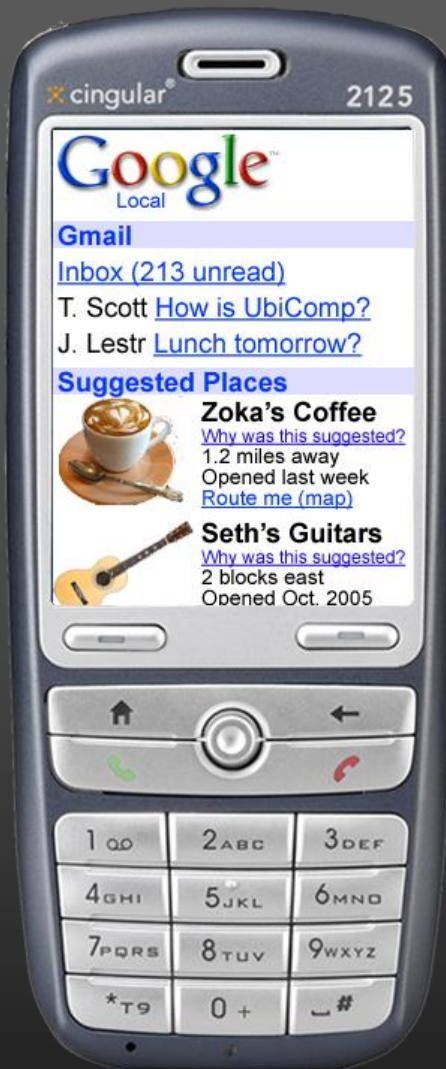

Explicit Indicators

- Move about the world → Supply rating “tags”
- Requires device interaction

Implicit Indicators

- Location aware device → Observe travel patterns
- No device Interaction

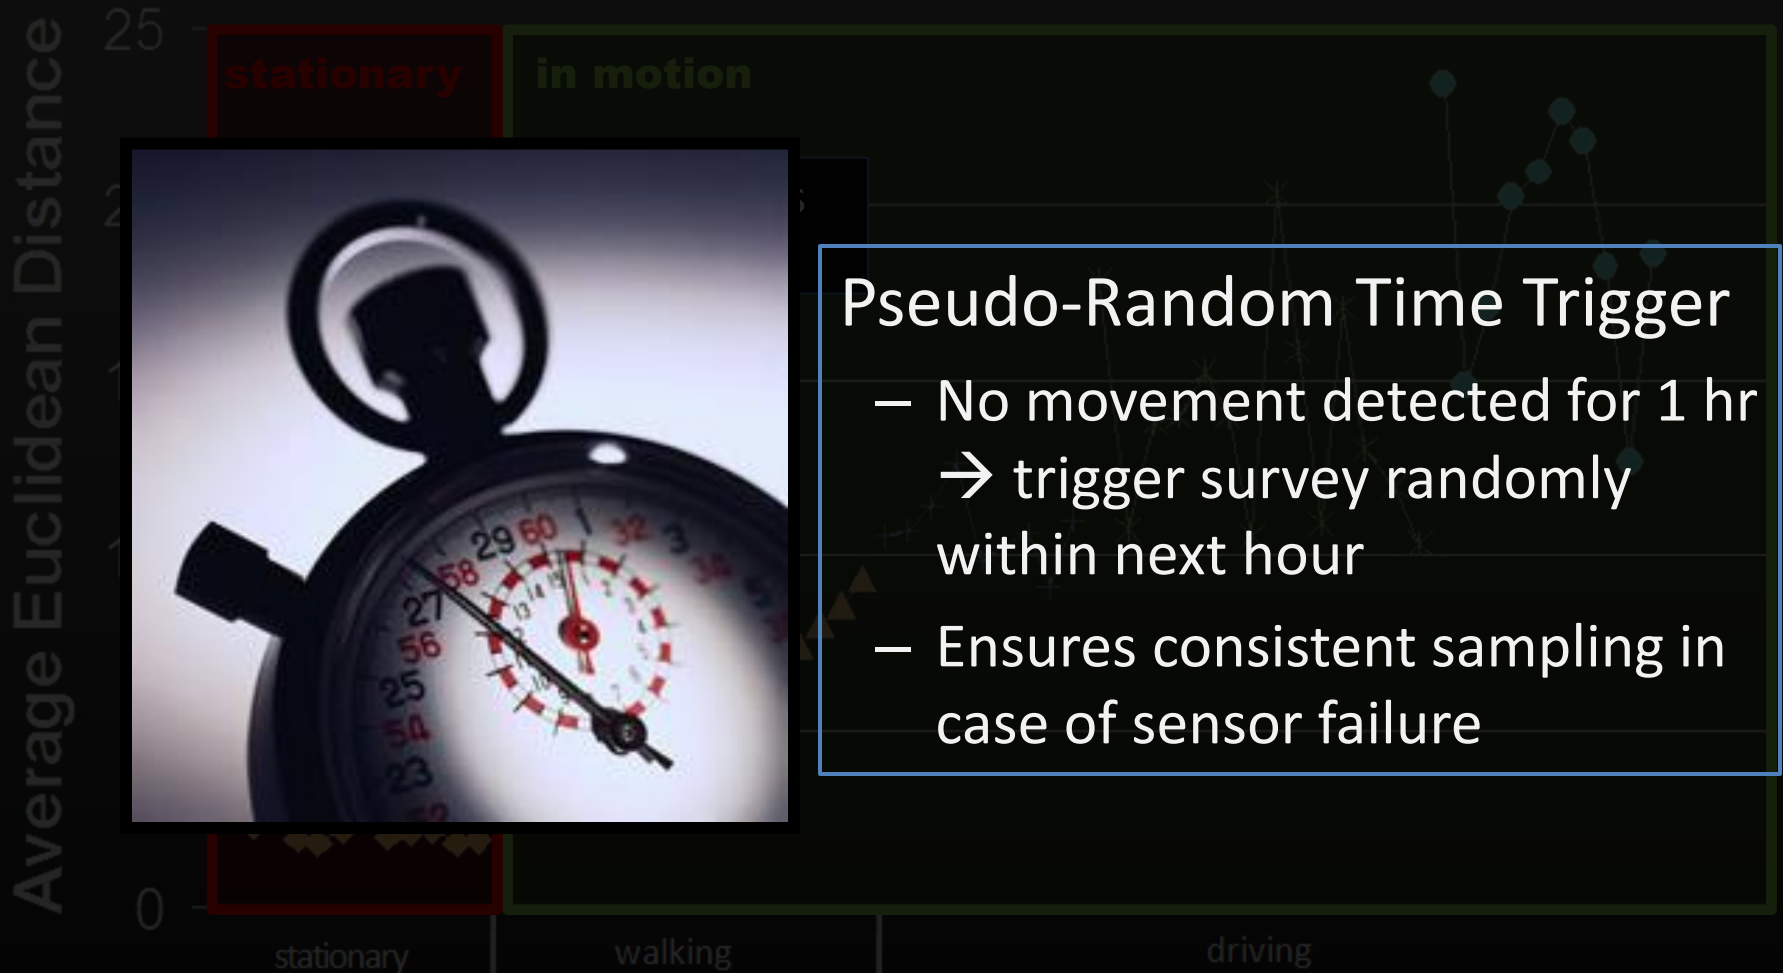

study overview

- Four week study
- Participant profile
 - 16 Participants
 - Gender balanced (8 male / 8 female)
 - Ages: 22-56 (median 29)
 - Various professions
 - Furniture designer, political consultant, bookseller, translator, ...
- Tasked with
 - Carrying mobile phone for four weeks
 - Answering 11 *in situ* surveys a day about current place
 - Completing a minimum of 3-4 web diary entries a week
- Compensation
 - \$1 per survey
 - Also compensated for interviews & paper questionnaires

6 - 15 minutes

Back

Next

1. What was the primary reason for your rating?

2. How did you find out about this place?

3. Why did you go to this place?

4. Would you recommend this place to others? Why or why not?

5. If you were with a group, how did the group decide to go to this place?
If you were not with a group, type "N/A"

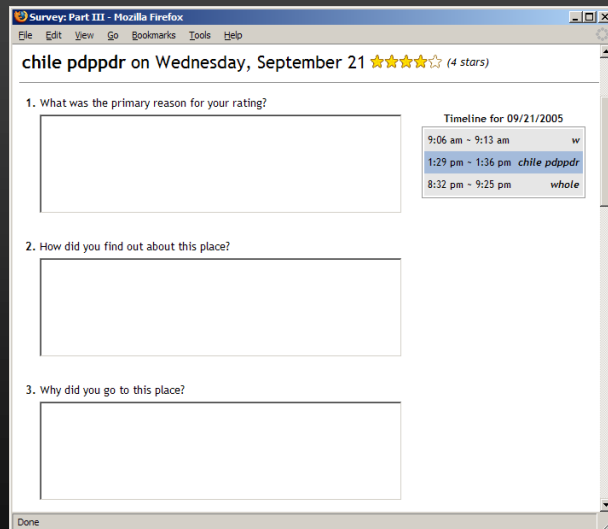

Timeline for 09/08/2005

5:32 pm (Wed) ~ 8:23 am	<i>My House</i>
8:30 am ~ 8:38 am	<i>Car</i>
9:12 am ~ 12:09 pm	<i>Net Desk - Seattle</i>
12:17 pm ~ 12:28 pm	<i>Walk</i>
12:28 pm ~ 12:46 pm	<i>Chez Dave - Union Square</i>
12:55 pm ~ 2:20 pm	<i>Walking</i>
2:20 pm ~ 3:48 pm	<i>Net Desk - Seattle</i>
3:48 pm ~ 3:50 pm	<i>Walking</i>
4:42 pm ~ 4:44 pm	<i>Rock Bottom - Seattle</i>
4:51 pm ~ 5:01 pm	<i>Walking</i>
6:35 pm ~ 6:39 pm	<i>Elephant and Castle</i>
6:46 pm ~ 7:34 pm	<i>Walking</i>
8:07 pm ~ 9:16 pm	<i>Fox Sports</i>

data collection stats

- ESM
 - 3,458 completed out of 4,295 (80.5%)
 - 216 surveys completed per person
 - 28 days average
 - 1.5 minute average completion time
- Web Diary
 - 368 web diary sessions completed
- Places
 - 1,981 individual place visits logged
 - 862 of which were public
 - ~2 a day per participant

Correlating Visit Frequency to Preference

Public Places (N = 536)

Average Place Rating

skewed distribution of ratings

...by and large I go to places I've been to before and I already like.

-Participant #1

Most of them get pretty good ratings, 4's or 5's because I scrupulously avoid places that I've known I don't like and I always go back to the ones I do like.

- Participant #12

Distribution of ratings indicates that people tend to go where they like

personal device as data collector

- MyExperience updated to run unobtrusively on user's own phone
 - Limit interruption
 - Idle sensing
 - Obey phone profile

mobile sensing platform

MSP Features

- Built on iMote2
- Linux OS
- 32MB RAM
- 2 GB Flash Storage
- Zigbee and Bluetooth
- 12-16 hours battery life

10 Built-in Sensors

- 3D Accelerometer
- 2D Compass
- Barometer
- Humidity
- Visible light
- Infrared light
- Temperature
- UART, GPIO breakouts for additional sensors

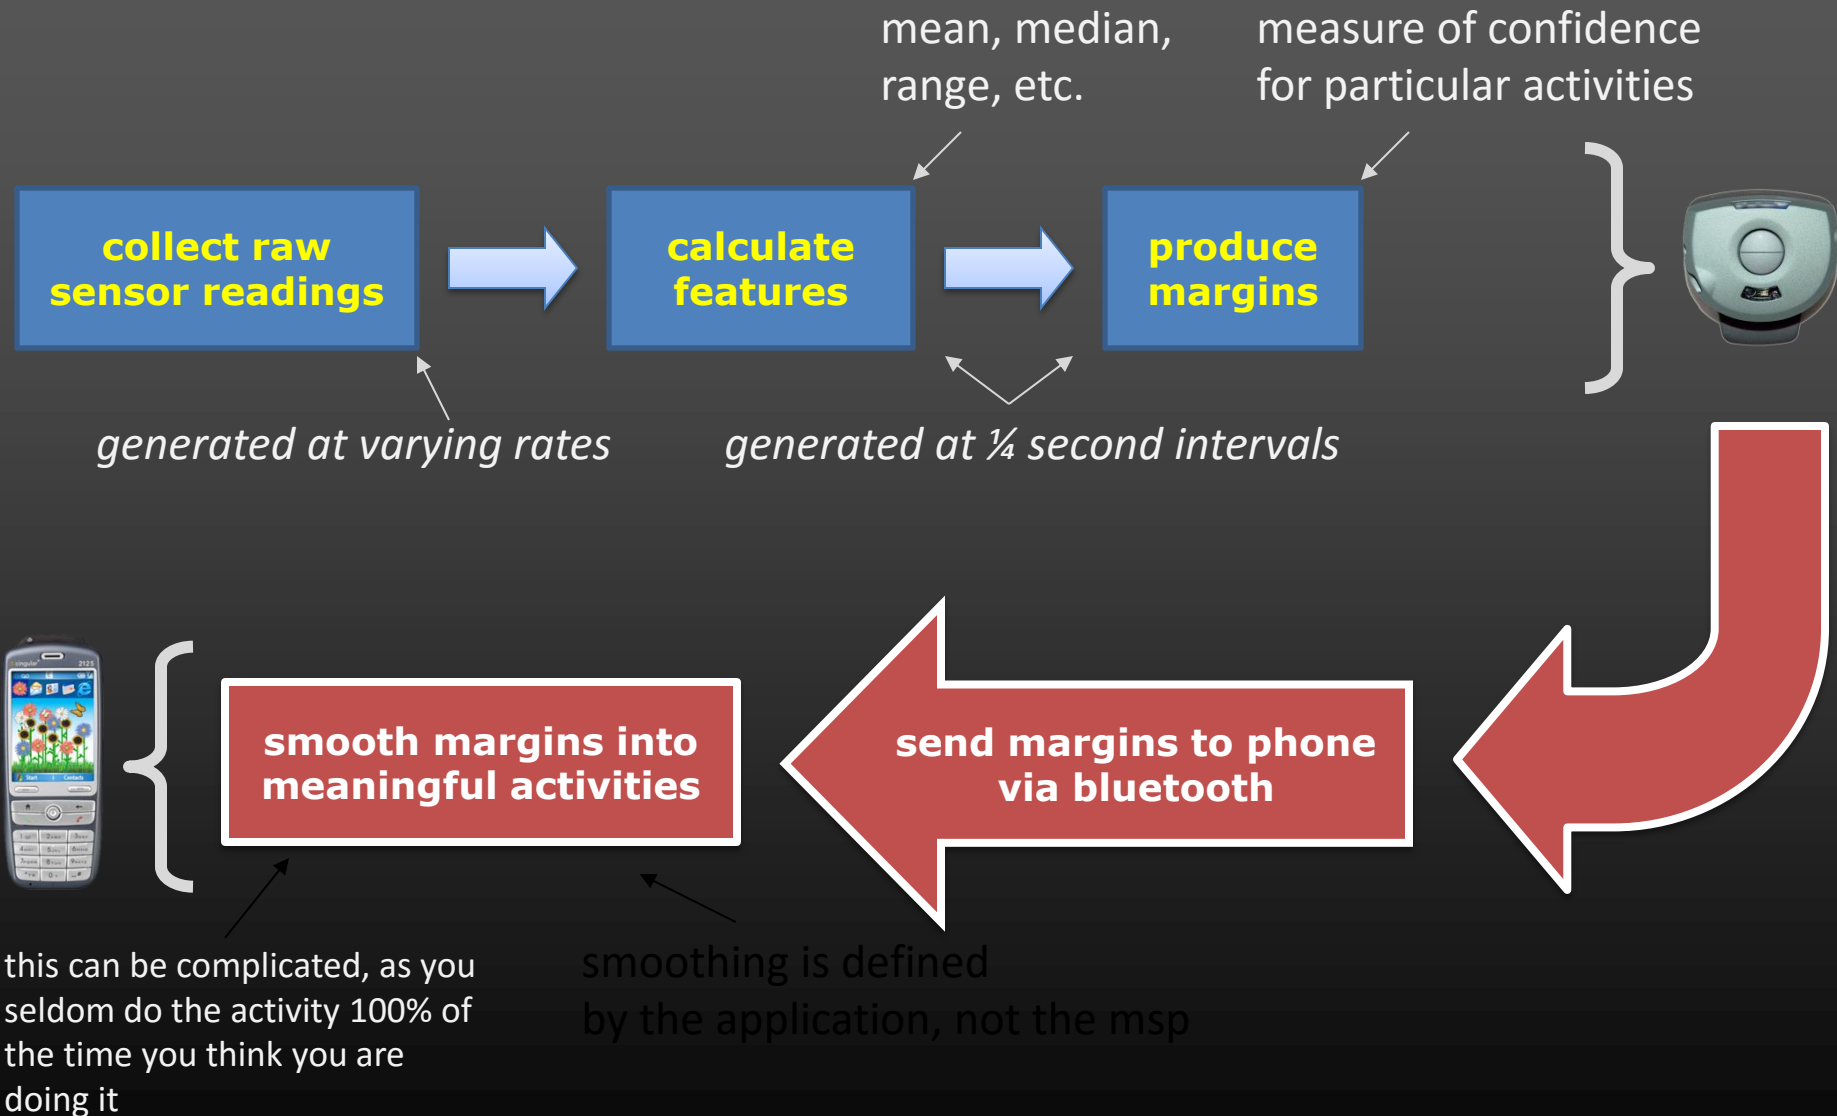

wearable msp

mSP & myexperience

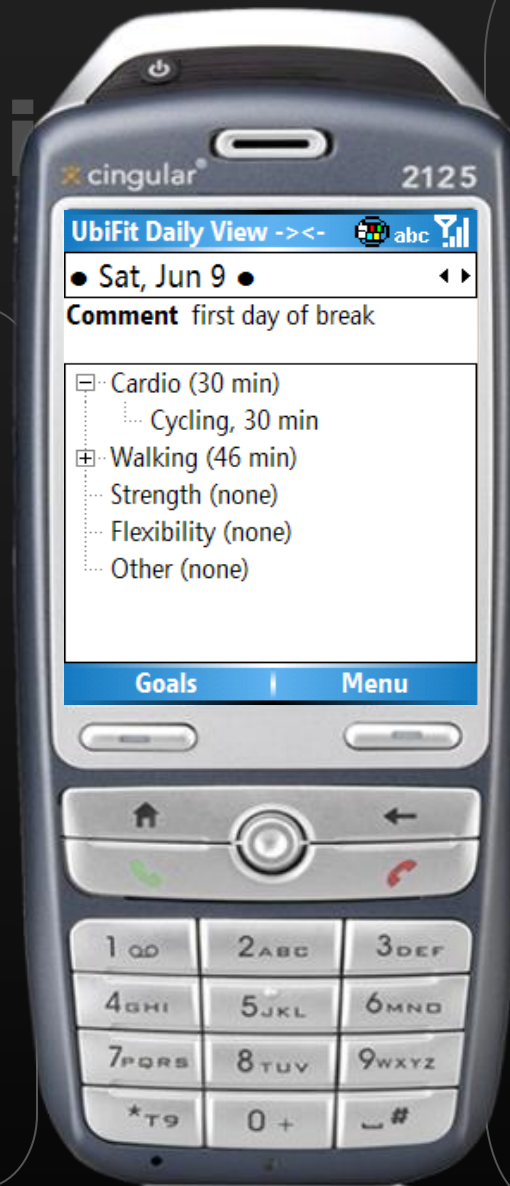

from raw sensor readings to meaningful activities

activity journal

any physical activity including
those not inferred by the
fitness device

manual journaling

glanceable display

runs on the background screen of mobile phones, so it's frequently seen by the individual

at-a-glance determination of:

- active or inactive week,
- variety in routine,
- this week's goal met
- recent goal met

day view

strength

cardio

flexibility

walk

this week's goal met

recent goal met

the glanceable display in action

3-week field trial (n=12)

- Summer 2007
- 6 male, 6 female
 - wore fitness device & used UbiFit Garden everyday
- Aged 25-35, lived in seattle area
- Occupations (mostly non-technical)
 - receptionist, marketing, actor, copywriter, musician, merchandiser
- Regularly used mobile phones
- Wanted to increase physical activity

3-week field trial: overview of method

general reactions

- very positive, particularly r.e. the glanceable display (surprisingly so):

“The silly flowers work, you know?...It’s right there on your wallpaper so every time you pick up your phone you are seeing it and you’re like, ‘Oh, look at this. I have all those flowers. I want more flowers.’ It’s remarkable, for me it was remarkably like, ‘Oh well, if I walk there it’s just 10 minutes. I might get another flower.’ So, sure, I’ll just walk.” {p5}

general reactions (contd)

“I think it’s a great idea really...so you can physically see how much you’re really moving around with the flowers growing and everything. ...You kind of want to see more flowers grow or whatever opposed to working out or walking around and not seeing any results if you walk daily. I mean, it’s going to take several months, but I feel like on the phone you can actually see that you’re achieving something...”

{p12}

breakdown of activities performed

	inferred	journalled
cardio	34 (45%)	42 (55%)
walking	143 (55%)	115 (45%)
strength	0	79 (100%)
flexibility	1 (1%)	75 (99%)
other	29 (67%)	14 (33%)
totals	207 (39%)	325 (61%)

17 - 84 activities per participant (mean: 44, median: 39)

perceived errors of activity inference

- our analysis revealed 7 types of perceived errors with activity inference
- the fitness device could:
 1. make an error in start time
 2. make an error in duration
 3. confuse an activity it **was** trained to infer with another it **was** trained to infer
 4. confuse an activity it **was not** trained to infer with one it **was** trained to infer
 5. fail to detect an activity it **was not** trained to infer
 6. fail to detect an activity it **was** trained to infer
 7. detect an activity when none occurred

subset of ubifit triggers

Journal reminder

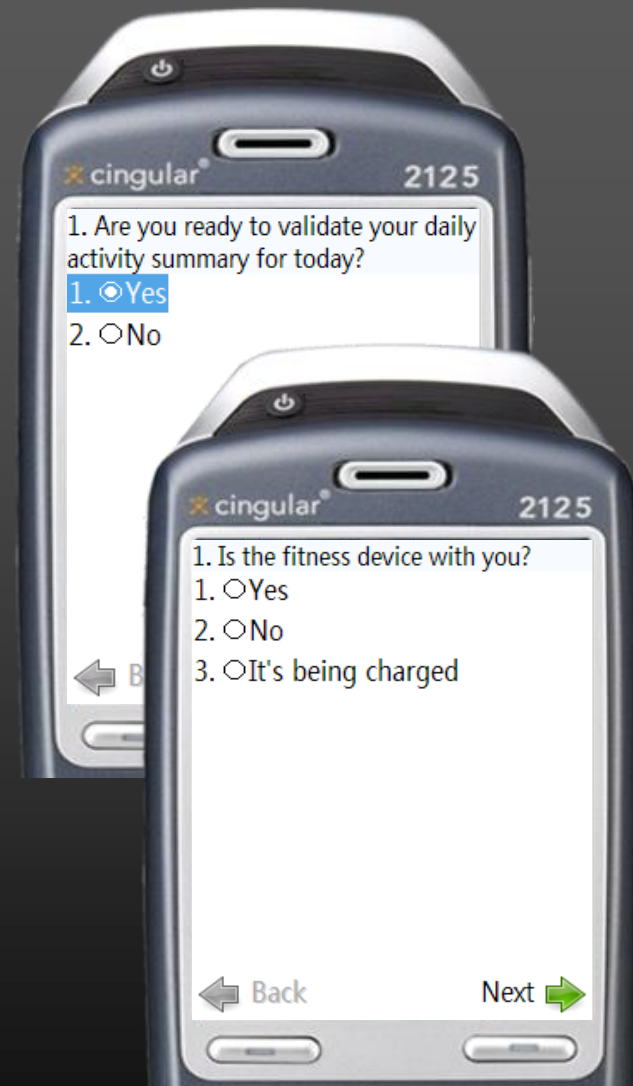

- If journal has not been used in ~2 days and it's past 8PM, launch journal reminder

Uncertain activity occurred

- If the system *knows* an activity occurred but couldn't determine the exact activity, a survey is launched

MSP troubleshooter

- If the MSP hasn't been seen in ~2 hrs and it's after 10AM, launch a troubleshooter

mobilephoneusage

Consolvo^{1,2}, James Landay^{1,2}**

dub design:
use:
build:

¹ university of washington

² Intel Research, Seattle

our goal

Collect data about *real* device usage & context *in the field* in a scalable fashion

Data can be used to

- Better understand actual device/system usage
 - E.g., how mobility patterns affect access to WiFi
- Inform the design of future systems
 - E.g., optimize battery utilization algorithms based on learned charging behaviors

Kjeldskov, J. and Stage, J. *New Techniques for Usability Evaluation of Mobile Systems*. IHCS2003

Schusteritsch et al. *Towards the Perfect Infrastructure for Usability Testing on Mobile Devices*. CHI2007.

Roto et al. *Examining Mobile Phone Use in the Wild with Quasi-Experimentation*. HIIT Tech Report 2004

Backup recording for camera 4

Reichl et al. *The LiLiPUT Prototype: A Wearable Lab Environment for User Tests of Mobile Telecommunication Applications*. CHI2007

research challenges

1. Coverage: collect rich information about features of interest
2. Scale: collect large amounts of data over long periods of time
3. Extensible: easily add new data collecting capabilities
4. Situated: collect *real* usage data in its natural setting
5. Robustness: protect or backup data collected in the field

case study 1: charging behavior

Motivation

- Battery life has long been a challenge in mobile computing
- Dependent on usage:
 - WiFi, video, length of calls

Study

- 2 week pilot study with 4 people
- Log device usage (e.g., phone calls, WiFi, active applications)
- Actively track battery life
- Survey at moments of charging

battery life & user response

case study 2: sms usage

Motivation

- 1 trillion SMS messages sent worldwide in 2005
- Explosive growth begs research questions:
 - Why SMS vs. voice?
 - Where do people use SMS?

Study

- Similar setup as before
- Asked questions after SMS sent
 - User's location
 - Reason for using SMS

sms usage, mobility & self-report

3-month Study Combining Activity Sensing with Device Usage Logging

longitudinal study

- The data collected should allow us to explore:
 - The link between mobility patterns and application usage
 - Do people SMS more when stationary than moving?
 - Driving while texting
 - How often users suffer from low cell signal strength and how this affects voice vs. sms
 - Is application usage correlated to location, time, etc.
 - Could we start to prefetch data based on context?

analysis tools

How can we analyze gigabytes of sensor data per participant plus contextualized self-report data?
