“Our visual and auditory senses are steeped...in sea of digital information but our bodies remain in the physical world...one cannot **feel** and confirm the existence of digital information through one’s **hands** and **body**.”

Hiroshi Ishii (1997)

Workflow

Map

Robot completes initial scan
and generates map

Select

Select from model library
or upload a new design

Plan + Edit

Arrange and edit objects in
the environment

Print

Robot navigates to target
location and prints objects

Workflow

Map

Robot completes initial scan
and generates map

Select

Select from model library
or upload a new design

Plan + Edit

Arrange and edit objects in
the environment

Print

Robot navigates to target
location and prints objects

Mapping

Rooted Firmware

*Printer removed to show LiDAR

Workflow

Map

Robot completes initial scan
and generates map

Select

Select from model library
or upload a new design

Plan + Edit

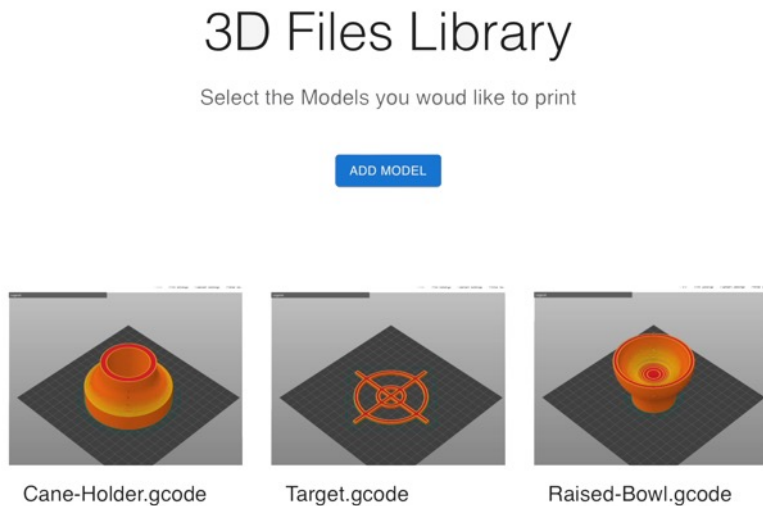

Arrange and edit objects in
the environment

Print

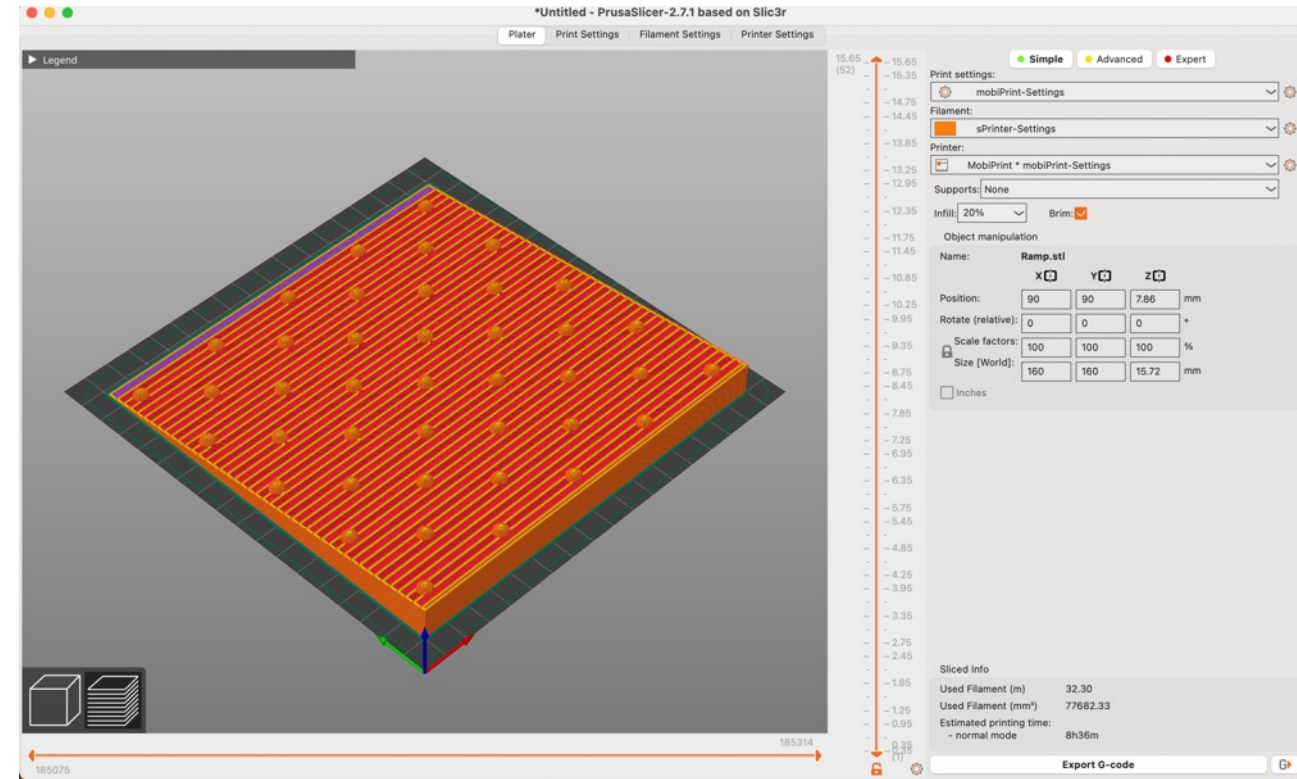

Robot navigates to target
location and prints objects

Selecting Objects

- Preloaded Models

- Slice & Upload New Objects

Workflow

Map

Robot completes initial scan
and generates map

Select

Select from model library
or upload a new design

Plan + Edit

Arrange and edit objects in
the environment

Print

Robot navigates to target
location and prints objects

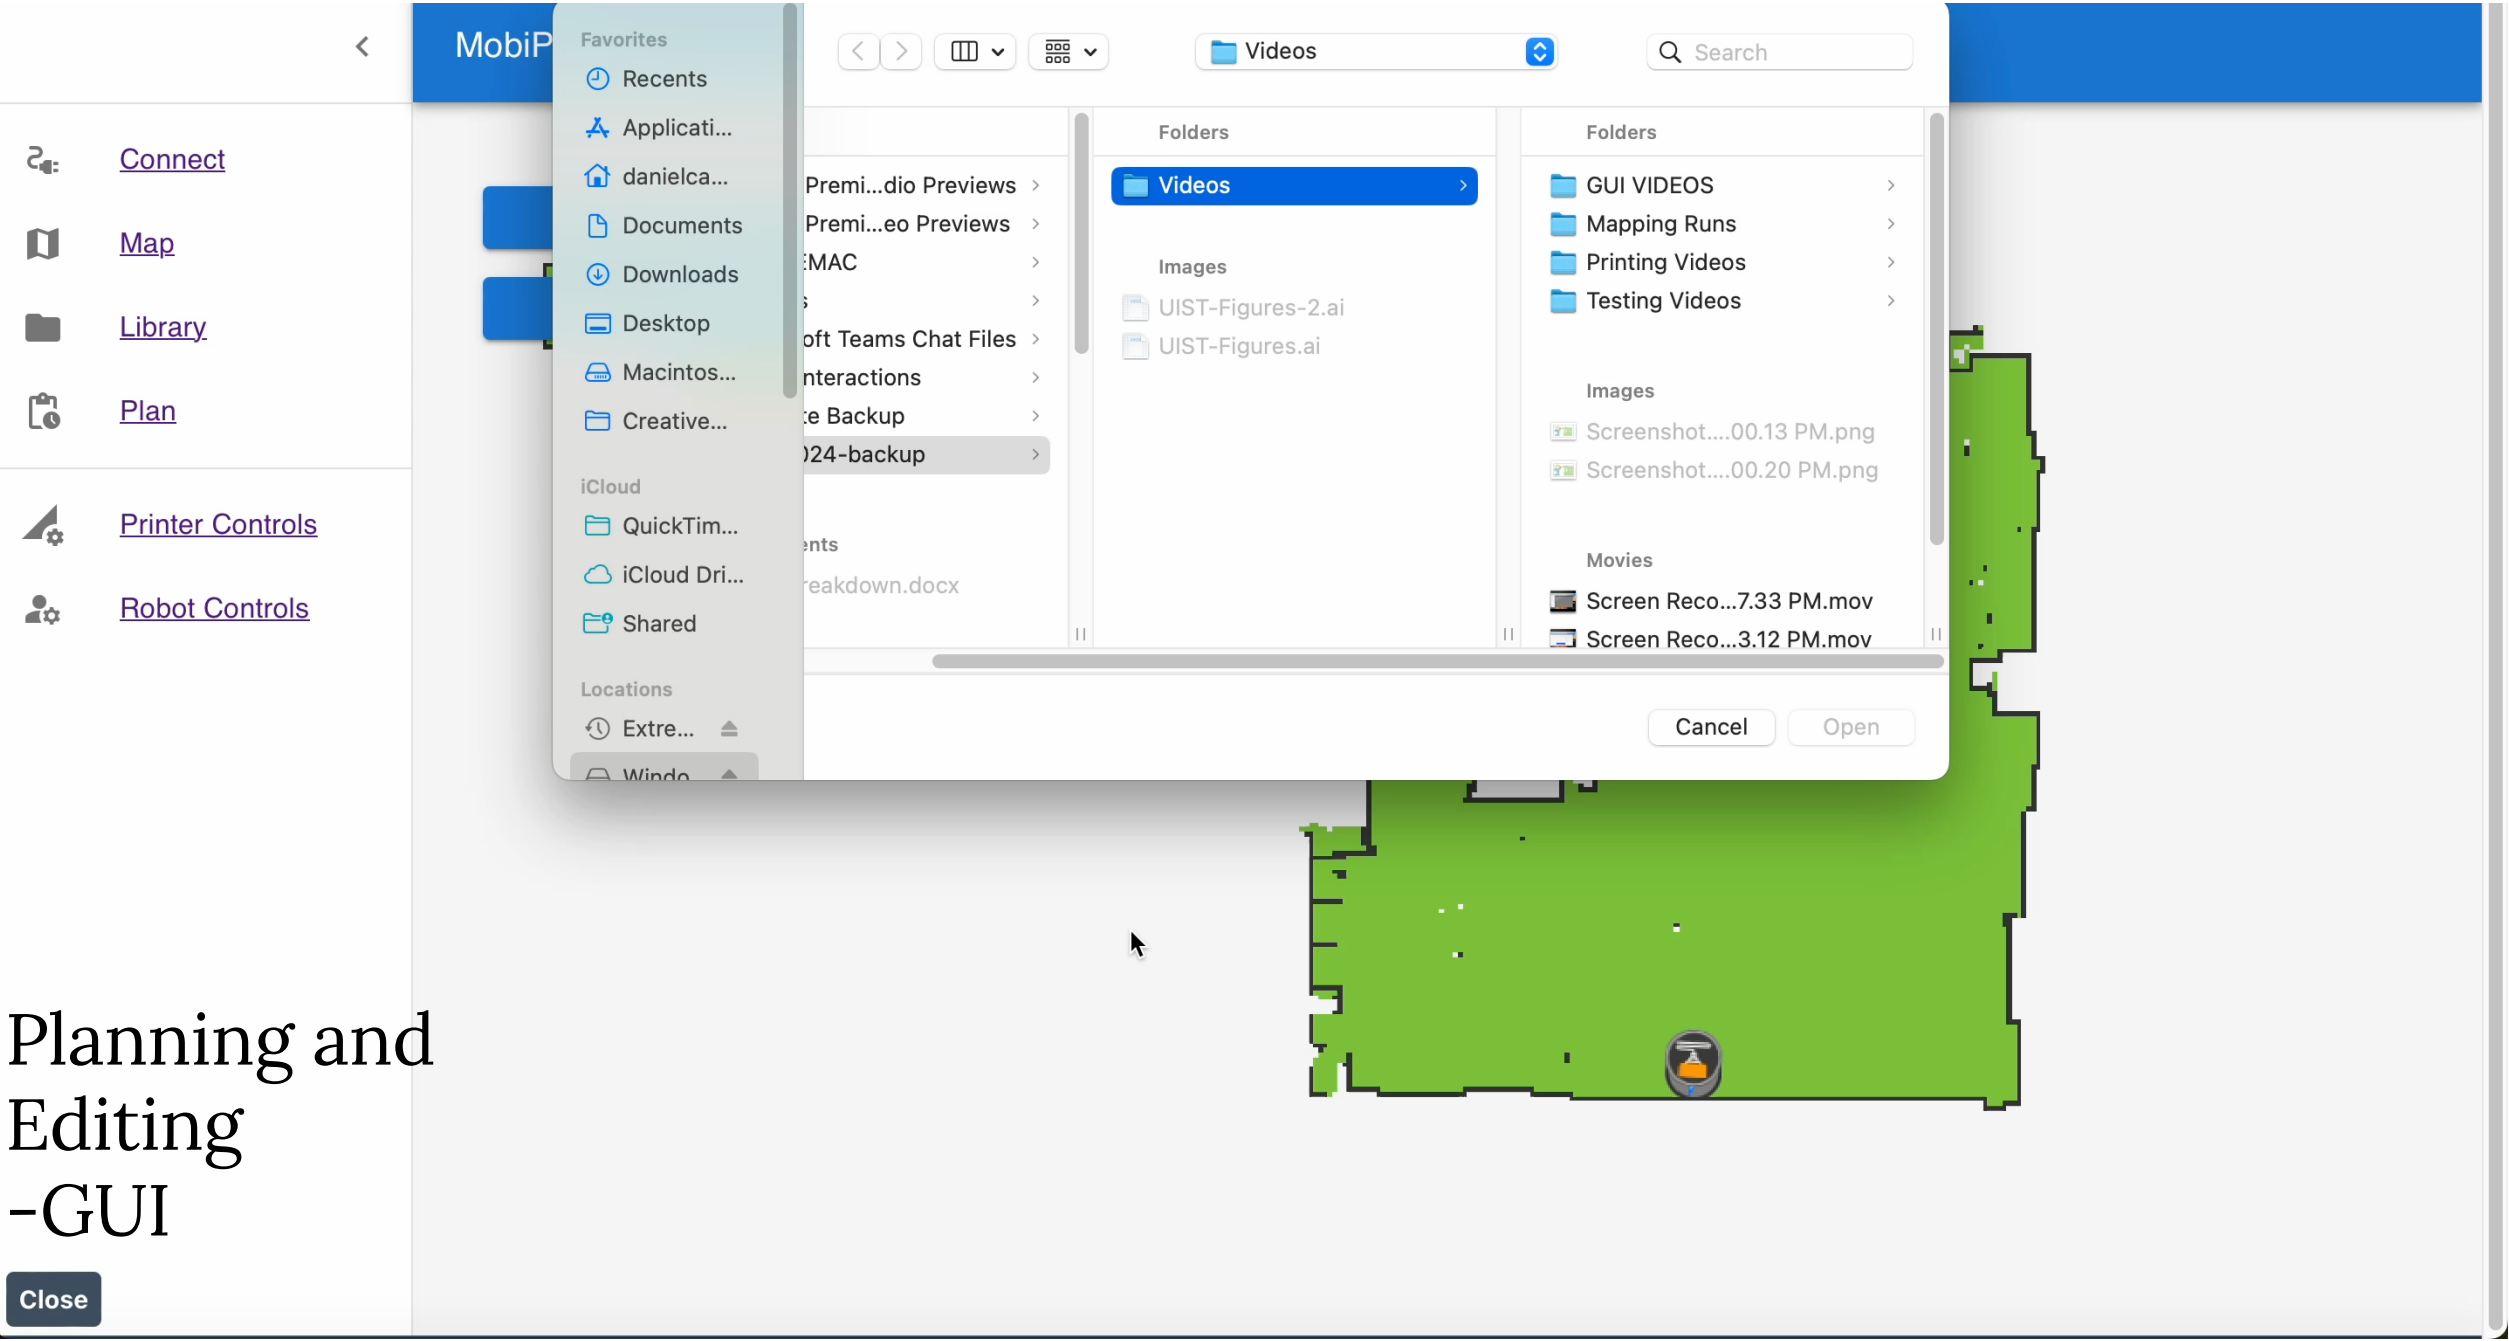

Planning And Editing

Users can treat the map as a canvas to place and edit objects

Planning and Editing -GUI

Raised pet bowl

Design Considerations

- Integrate Environment and Context Information into Design Process
- Support a Spectrum of Automation
- Work Directly In/On the Environment
- Consider Permanence, Removal, and Lifecycle

Summary

- Mobiprint can navigate, map, and print in ad-hoc environments
- Convert a floorplan into a 3D printable canvas
- Enable large working area across real-world environments

How can we work across real-world environments to **enhance interactions?**

Our Method

Moiré Effect

Layer 1

Layer 2

$$\Delta_{moire} = \frac{T_{Layer1} \Delta_{Layer2}}{T_{Layer1} - T_{Layer2}}$$

Can we use the Moiré effect to track inputs?
